Detailed Syllabus

Course Code: BSCS1110	**Discrete Mathematics**	L	T	P	C
Version No. 01	**Date of Approval:**	3	1	0	4
Prerequisite/Exposure	Basic knowledge of Mathematical function				
Co-requisites					

Course Objectives

Throughout the course, students will be expected to demonstrate their
understanding of Discrete Mathematics by being able to do each of the following:
Use mathematically correct terminology and notation.
Construct correct direct and indirect proofs.
Use division into cases in a proof.
Apply logical reasoning to solve a variety of problems.

Course Outcomes

At the end of the course, students will be able to:

1. Understand the concept of mathematical logic and mathematical induction.
2. Learning the concept of Combinatorics and Stack and their applications.
3. Apply the mathematical knowledge to solve the recurrence relations.
4. Understanding the concept of Graph and their applications.
5. Understanding the concept of Boolean algebra their applications.

Course Content

Unit I: Mathematical Logic   8 lecture hours

Introduction – Propositions – Connectives – Truth tables – Tautologies and Contradictions –
Equivalences implications – Normal forms – Methods of proof rules of inference for quantified
propositions– Mathematical induction.

Unit II: Combinatorics   8 lecture hours

Primitive Stack operations: Push & Pop, Array and Linked Implementation of Stack in C, Application
of stack: Prefix and Postfix Expressions, Evaluation of postfix expression, Recursion, Tower of Hanoi
Problem, Simulating Recursion, Principles of recursion, Tail recursion, Basics of counting –
Combinations of permutations – Enumeration of combination and permutation – Pigeonhole principle –
Inclusion – Exclusion principle – Ordered and unordered portions.

Unit III: Recurrence Relations   8 lecture hours

Generating function of sequences – Calculating coefficients of generating functions – Recurrence
relations– Solving recurrence relations by substitutious and generating functions – Method of
characteristic roots – Solution of homogenous recurrence relations.

Unit IV: Graph Theory   8 lecture hours

Basic concepts of graph theory – Diagraph – Paths – Reachability connectedness – Matrix
representation of graphs – Subgraphs– Isomorphisms trees – Properties – Directed tress – Binary trees.

Unit V: Boolean Algevra   8 lecture hours

Post – Hasse diagrams – Lattices – Types of Lattices – Boolean Algebra– Basic theorems –
Applications.

Text Books

1. J.L. Mott, A. Kandelad T.P. Baker, Discrete Mathematics for Computer Scientists and
Mathematicians, PHI, 2nd Edition, 1999.

Reference Books

1 J.P. Trembley and R. Manohar, Discrete Mathematical Structures with Applications to
Computer Science, Tata McGraw Hill – 13th reprint 2001.

Course Code: BSCS1120	Computer System Organization	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

Course Objectives

1. Discuss the basic concepts and structure of computers.
2. Understand concepts of register transfer logic and arithmetic operations.
3. Explain different types of addressing modes and memory organization.
4. Learn the different types of serial communication techniques.
5. Summarize the Instruction execution stages

Course Outcomes

At the end of the course, students will be able to:

1. Understand the basic organization of computer and different instruction formats and addressing modes.
2. Analyze the concept of pipelining, segment registers and pin diagram of CPU.
3. Understand and analyze various issues related to memory hierarchy.
4. Evaluate various modes of data transfer between CPU and I/O devices.
5. Examine various inter connection structures of multi processors.

Course Content

Unit I: OVERVIEW & INSTRUCTIONS   9 lecture hours

Components of a computer system – Technology – Performance – Power wall – Uniprocessors to multiprocessors; Instructions – operations and operands – representing instructions – Logical operations – control operations – Addressing and addressing modes.

Unit II: ARITHMETIC OPERATIONS   9 lecture hours

ALU – Addition and subtraction – Multiplication – Division – Floating Point operations.

Unit III: PROCESSOR AND CONTROL UNIT   9 lecture hours

Basic MIPS implementation – Building datapath – Control Implementation scheme – Pipelining – Pipelined datapath and control – Handling Data hazards & Control hazards – Exceptions..

Unit IV :PARALLELISM   9 lecture hours

Instruction-level-parallelism – Parallel processing challenges – Flynn's classification – Hardware multithreading – Multicore processors.

Unit V: MEMORY AND I/O SYSTEMS   9 lecture hours

Memory hierarchy – Memory technologies – Cache basics – Measuring and improving cache performance – Virtual memory, TLBs – Input/output system, programmed I/O, DMA and interrupts,I/O processors.

Course Code: BSCS1130	Computer Programming using 'C'	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

The course aims to provide exposure to problem-solving through programming. It aims to train the student to the basic concepts of the C-programming language. This course involves a lab component which is designed to give the student hands-on experience with the concepts.

COURSE OUTCOMES:

1. Identify situations where computational methods and computers would be useful.
2. Given a computational problem, identify and abstractthe programming task involved.
3. Approach the programming tasks using techniques learned and write pseudo-code.
4. Choose the right data representation formats based on the requirements of the problem.
5. Use the comparisons and limitations of the various programming constructs and choose the right one for the task in hand.
6. Write the program on a computer, edit, compile, debug, correct, recompile and run it.
7. Identify tasks in which the numerical techniques learned are applicable and apply them to write programs, and hence use computers effectively to solve the task.

COURSE CONTENT

UNIT I   INTRODUCTION   **8 lecture hours**

Generation and Classification of Computers- Basic Organization of a Computer –Number System – Binary – Decimal – Conversion – Problems. Need for logical analysis and thinking – Algorithm – Pseudo code – Flow Chart.

UNIT II   C PROGRAMMING BASICS   **10 lecture hours**

Problem formulation – Problem Solving - Introduction to ' C' programming –fundamentals – structure of a 'C' program – compilation and linking processes – Constants, Variables – Data Types – Expressions using operators in 'C' – Managing Input and Output operations – Decision Making and Branching – Looping statements – solving simple scientific and statistical problems.

UNIT III   ARRAYS AND STRINGS   **9 lecture hours**

Arrays – Initialization – Declaration – One dimensional and Two dimensional arrays. String- String operations – String Arrays.Simple programs- sorting- searching – matrix operations.

UNIT IV   FUNCTIONS AND POINTERS   **9 lecture hours**

Function – definition of function – Declaration of function – Pass by value – Pass by reference – Recursion – Pointers - Definition – Initialization – Pointers arithmetic – Pointers and arrays- Example Problems.

UNIT V   STRUCTURES AND UNIONS   **9   lecture hours** Introduction
– need for structure data type – structure definition – Structure declaration – Structure within a structure -
Union - Programs using structures and Unions – Storage classes, Pre-processor directives.

TEXT BOOKS

1. Gottfried, Byron S., Programming with C, Tata McGraw Hill
2. Balagurusamy, E., Computing Fundamentals and C Programming, Tata McGraw-Hill

REFERENCE BOOKS

1. Jeri R. Hanly& Elliot P. Koffman, Problem Solving and Program Design in C, Addison Wesley.
2. YashwantKanetker, Let us C, BPB
3. Rajaraman, V., Computer Programming in C, PHI

Course Code: PHYS1011	APPLIED PHYSICS	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:
The Objectives of Applied Physics are:

1. An ability to apply profound understanding of Quantum Mechanics and its applications.

2. An understanding of free electron gas model

3. An ability to design a Laser system and its component, or process to meet desired needs within realistic constraints such as health and safety, manufacturability

4. The broad education necessary to understand special theory of relativity.

5. A knowledge of upcoming technologies like photonics

COURSE OUTCOMES:
1. Upon successful completion of this course, the student will be able to:
CO-1 Students would be able to describe the Quantum Mechanics and its applications.
CO-2 Students would be able to write down the band theory of Solids.
CO-3 to enable student to learn and to apply concepts learnt in Quantum optics in Industry and in real life.
CO-4 to enable students to learn the idea of**Global Positioning System (GPS)** and to explore its further applications and importance in advancement of technologies
CO-5 To identify the applications of electrodynamics using Maxwell equations

COURSE CONTENT:

Unit 1 –Semiconductor fundamentals   8 lecture hours

Intrinsic and extrinsic semiconductors, elemental and compound semiconductor, carrier concentration and Fermi level of intrinsic and extrinsic semiconductor, thermal effects, conductivity and carrier mobility in semiconductors.

Unit 2 –Junction Theory and diodes   8 lecture hours

PN junction , junction potential , biasing of PN junction , I-V characteristics , static and dynamics resistances , breakdown phenomena- avalanche and Zener process, Zener diode and applications of diode.

Unit 3 – Number system and Boolean algebra   8 lecture hours

Decimal/Binary/Octa/Hexa number system and conversions, Basic theorem and properties of Boolean algebra, Logic operations and gates, Adder and subtractor, comparator.

Unit 4 –Optics   8 lecture hours

Snell's Law, Total Internal reflection , graded index, Interference- Interference of Light, Division of wavefronts: amplitude, interference in thin films, Newton's rings; Diffraction-Single slit, Diffraction grating, Grating spectra, Rayleigh's criterion and resolving power of grating.

Unit 5 -LASER   **8 lecture hours**

Einstein's coefficients, Population Inversion, Three level and four level laser, Laser characteristics, He-Ne laser and applications.

Course Code: BSCS1131	Computer Programming using 'C' Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

This course emphasizes the nature of C language using many applications and helps to understand the need to choose the language for solving the problem. The students can understand the art of computer programming.

LIST OF EXPERIMENTS:

1.   C Programming using Simple statements andexpressions

2.   Scientific problem solving using decision making andlooping.

3.   Simple programming for one dimensional and two dimensionalarrays.

4.   Solving problems using Stringfunctions

5.   Programs with user defined functions – Includes ParameterPassing

6.   Program using Recursive Function and conversion from given programto flow chart.

7.   Program using structures andunions.

Course Code: BSCS1141	Computer System Organization Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

This course is designed to provide a comprehensive introduction to digital logic

1. Design leading to the ability to understand number system representations, binary codes, binary arithmetic and Boolean algebra, its axioms and theorems, and its relevance to digital logic design.
2. To Analyze and design simple systems composed of programmable logic, such as
3. ROMs and PLAs. Aiming at conducting Tutorial, seminars and remedial classes.

COURSE OUTCOME:

Upon successful completion of this course, students will be able to

1. Demonstrate knowledge of binary number theory, Boolean algebra and binary codes.
2. Analyze and design combinational systems using standard gates and minimization methods (such as Karnaugh maps).
3. Analyze and design combinational systems composed of standard combinational modules, such as multiplexers flip-flops,demultiplexer and decoders.
4. Demonstrate knowledge of simple synchronous sequential systems.
5. Analyze and design sequential systems composed of standard sequential modules, such as counters and registers.
6. Analyze and design simple systems composed of programmable logic, such as ROMs and PLAs.
7. Perform basic arithmetic operations with signed integers represented in binary.

LIST OF EXPERIMENTS:

1. Study the basic architecture of computer system and ALU operations.
2. Study the memory and I/O system of Computer.
3. Study the processor and control unit function.
4. Study the complete instruction set of 8085 and write the instructions in the instructionset of 8085 along withexamples.
5. Write the working of 8085 simulators GNUsim8085 and basic architecture of 8085along with smallintroduction.
6. Write an assembly language code in GNUsim8085 to add two numbers.
7. Write an assembly language code in GNUsim8085 to add n consecutive numbers.
8. Write an assembly language code in GNUsim8085 to count the numbers of 1's.

9. Write an assembly language code in GNUsim8085 to implement multiply two 8 bit numbers without shifting.
10. Write an assembly language code in GNUsim8085 to addition of two numbers using lxi.
11. Write an assembly language code in GNUsim8085 to find the smallest and largest number from the given serives.
12. Write an assembly language code in GNUsim8085 to find the factorial of anumber.

COURSE CONTENT

Unit I:Reading Writing Level 1   **8   lecture hours**

Listening: Identifying the key words
Reading and Writing: Textual Essay: Advertising
Letter Writing: Informal letters
Functional Grammar: Basics of grammar
Vocabulary: Identifying jumbled letters and framing sentences

Unit II: Reading Writing Level 2   **8   lecture hours**

Listening: Conversations
Reading and Writing: Textual Essay: Art of Listening
Letter Writing: Permission Letters
Functional Grammar: Tenses
Vocabulary: Commonly used phrasal verbs.

Unit III: Reading Writing Level 3   **8 lecture hours**

Listening: Listening to songs and answering multiple choice questions
Reading and Writing: Textual Essay: An Astrologer's Day
Letter Writing: To the editor
Functional Grammar: Active and Passive voice
Vocabulary: Prefix and Suffix

Unit IV: Laboratory   **8 lecture hours**

English Master- Exercises 1-10, Cambridge Advanced Learners' Dictionary.

SEMESTER-II

Course Code: EVS101	**Environment Studies**	L	T	P	C
Version No. 01	**Date of Approval:**	2	1	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

1. The students will understand the objective of environmental studies and importance of natural resources conservation.
2. The will realize the effect of toxic chemicals available in the environment. The students will learn about the sources, effects and control measures of air, water, soil, noise, thermal pollution. They will also be made aware of natural disaster management.
3. The students will understand the need of sustainable development, environment laws, role of information technology in the environment.
4. The students will be explained basic principles of green Chemistry and concept of atom economy.

COURSE OUTCOMES

At the end of the course, students will be able to:

1. Identify the scope and importance of studying the environment and analyze the problems associated with various natural resources.
2. Determine the harmful effects of toxic chemicals on living beings and environment.
3. Identify the harmful effects of environmental pollution and apply suitable control methods.
4. Analyze the different social issues affecting the society and environment
5. Interpret and utilize the different tools of Green Chemistry towards generating a zero waste environment.

COURSE CONTENT:

Unit I: Environment & Natural Resources   9 lecture hours

Definition, scope, importance, need for public, Natural Resources – forest resources – use, exploitation, deforestation, construction of multipurpose dams – effect on forests, Water resources – use of surface and subsurface water; effect of floods, drought, water conflicts, food resources – food problems, advantage and disadvantage of fertilizers & pesticides, effect on environment, Energy resources – need to develop renewable energy, land resources – Land degradation, land slides, soil erosion, desertification & case studies.

Unit II: Ecology & Bio-Diversity   9lecture hours

Concept of ecosystem, structure & function of an ecosystem, producers, consumers and decomposers, energy flow, ecological succession, food chains, food webs and ecological pyramids. Bio diversity: Definition, genetic, species and ecosystem diversity, bio-geographical classification of India, hotspots, threats related to habitat loss, poaching of wildlife, man-wildlife conflicts, Conservation of bio-diversity.

Unit III: Environmental Pollution   9 lecture hours
Definition – Causes, pollution effects and control measures of Air, Water, Soil, Marine, Noise, Thermal, Nuclear hazards. Solid `waste management: causes, effects and control measures of urban and industrial wastes, pollution measures, case studies, Disaster management: floods, earthquake, cyclone and landslides.

Unit IV: Social Issues and the Environment   9 lecture hours

Urban problems related to energy & sustainable development, water conservation, rain water harvesting, watershed management, problems related to rehabilitation – case studies, Wasteland reclamation, Consumerism and waste products - Environment Protection Act, Air, Water, Wildlife, Forest Conservation Act, Environmental legislation and public awareness.

Unit V: Human Population and the Environment   9 lecture hours
Population growth, variation among nations, Population explosion – Family Welfare Programme, Environment and human health, Human Rights, Value Education, HIV/ AIDS, Women and Child Welfare, Role of Information   Technology – Visit to local polluted site / Case Studies.

Text Books

Reference Books

1. Keerthinarayana & Daniel Yesudian,"Environmental Science and Engineering",1st Edition, Hi-Tech publications, 2004.
2. Erach Bharucha, "A Text Book for Environmental Studies", Text Book of University Grants Commission, 2004.
3.   Metcalf & Eddy,"Wastewater Engineering: Treatment and Reuse", New Delhi, TMH

Course Code: BSCS1210	Numerical Methods for Problem solving	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure	Engineering Mathematics				
Co-requisites					

COURSE OBJECTIVE:

The objectives of the course are to make the students,

1. To develop the mathematical skills of the students in the areas of numerical methods.
2. To teach theory and applications of numerical methods in a large number of engineering subjects which require solutions of linear systems, finding eigen values, eigenvectors, interpolation and applications, solving ODEs, PDEs and dealing with statistical problems like testing of hypotheses.
3. To lay foundation of computational mathematics for post-graduate courses specialized studies and research.

COURSE OUTCOME:

1. Apply numerical methods to find our solution of algebraic equations using different methods under different conditions, and numerical solution of system of algebraic equations.
2. Apply various interpolation methods and finite difference concepts.
3. Work out numerical differentiation and integration whenever and wherever routine methods are not applicable.
4. Work numerically on the ordinary differential equations using different methods through the theory of finite differences.
5. Work numerically on the partial differential equations using different methods through the theory of finite differences.

COURSE CONTENT:

Unit I:Solution Of Equations and Eigenvalue Problems   10 Hours

Solution of algebraic and transcendental equations – Fixed point iteration method – Newton Raphson method- Solution of linear system of equations – Gauss elimination method – Pivoting – Gauss Jordan method – Iterative methods of Gauss Jacobi and Gauss Seidel – Matrix Inversion by Gauss Jordan method – Eigen values of a matrix by Power method.solving: Bisection Method, Newton-Raphson method, Iteration method.

Unit II:Interpolation and Approximation 9 Hours

Interpolation with unequal intervals - Lagrange's interpolation – Newton"s divided difference interpolation – Cubic Splines - Interpolation with equal intervals - Newton"s forward and backward difference formulae.

Unit III:Numerical Differentiation and Integration   9 Hours

Approximation of derivatives using interpolation polynomials - Numerical integration using Trapezoidal, Simpson"s 1/3 rule – Romberg"s method - Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson"s 1/3 rules.

Unit IV:Initial Value Problems For Ordinary Differential Equations   10 Hours

Single Step methods - Taylor‟s series method - Euler‟s method - Modified Euler‟s method – Fourth order Runge-Kutta method for solving first order equations - Multi step methods - Milne‟s and Adams-Bash forth predictor corrector methods for solving first order equations.

Unit V:Boundary Value Problems in Ordinary and Partial Differential Equations9 Hours

Finite difference methods for solving two-point linear boundary value problems - Finite difference techniques for the solution of two dimensional Laplace‟s and Poisson‟s equations on rectangular domain – One dimensional heat flow equation by explicit and implicit (Crank Nicholson) methods –One dimensional wave equation by explicit method.

Course Code: BSCS1220	Data Structure and Algorithms	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

The objective of this course is to teach students various data structures and to explain• them algorithms for performing various operations on these data structures.

COURSE OUTCOMES:

Upon successful completion of this course, students will be able to

1. Demonstrate familiarity with major algorithms and data structures.
2. Analyze performance of algorithms and choose the appropriate data structure and algorithm design method for a specified application.
3. Determine which algorithm or data structure to use in different scenarios and be familiar with writing recursive methods.
4. Demonstrate understanding of the abstract properties of various data structures such as stacks, queues, lists, trees and graphs and Use various data structures effectively in application programs.
5. Demonstrate understanding of various sorting algorithms, including bubble sort, insertion sort, selection sort, heap sort and quick sort.
6. Understand and apply fundamental algorithmic problems including Tree traversals, Graph traversals, and shortest paths.
7. Gain knowledge about B- Trees.

COURSE CONTENT:

UNIT 1 – INTRODUCTION   9

The concept of data structure, Abstract data type, data structure operations, algorithms complexity, time-space tradeoff. Introduction to strings, storing strings, string operations, pattern matching algorithms.

UNIT 2 – LINKED LIST   9

Linked list: Introduction and basic operations, Header nodes, Doubly Linked List, Circular Linked List, Applications of Linked List. Stack: primitive operation on stack, Representation of Stack as Linked List and array, Stacks applications.

UNIT 3 – QUEUES AND TREES   9

Introduction to queues, Primitive Operations on the Queues, Circular queue, Priority queue, Representation of Queues as Linked List and array, Applications of queue.

Trees - Basic Terminology, Binary Trees, Tree Representations using Array & Linked List, Basic operation on Binary tree, Traversal of binary trees:- In order, Preorder& post order, Applications of Binary tree.

UNIT 4 – GRAPHS 9

Introduction to graphs, Definition, Terminology, Directed, Undirected & Weighted graph, Representation of graphs.

UNIT 5 – SEARCHING & SORTING 9

Searching: linear search, Binary search, Sorting: Insertion sort, Selection sort, Quick sort, Bubble sort.

Course Code: BSCS1230	Operating Systems	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

The course familiarizes the student with basic knowledge of computer operating systems. The objective of the course is to provide basic knowledge of computer operating system structures and functioning.

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

1. Understand the difference between different types of modern operating systems, virtual machines and their structure of implementation and applications.

2. Understand the difference between process & thread, issues of scheduling of user level processes / threads and their issues & use of locks, semaphores, monitors for synchronizing multiprogramming with multithreaded systems and implement them in multithreaded programs.

3. Gain knowledge about the concepts of deadlock in operating systems and how they can be managed / avoided and implement them in multiprogramming system.

4. Demonstrate the design and management concepts along with issues and challenges of main memory, virtual memory and file system.

5. Understand the types of I/O management, disk scheduling, protection and security problems faced by operating systems and how to minimize these problems.

COURSE CONTENT:

UNIT I   OPERATING SYSTEMS OVERVIEW   9

Computer System Overview-Basic Elements, Instruction Execution, Interrupts, Memory Hierarchy, Cache Memory, Direct Memory Access, Multiprocessor and Multicore Organization. Operating system overview-objectives and functions, Evolution of Operating System.- Computer System Organization- Operating System Structure and Operations- System Calls, System Programs, OS Generation and System Boot.

UNIT II   PROCESS MANAGEMENT   9

Processes-Process Concept, Process Scheduling, Operations on Processes, Interprocess Communication; Threads- Overview, Multicore Programming, Multithreading Models; Windows 7 – Thread and SMP Management.Process Synchronization – Critical Section Problem, Mutex Locks, Semophores, Monitors; CPU Scheduling and Deadlocks.

UNIT III STORAGE MANAGEMENT   **9**

Main Memory-Contiguous Memory Allocation, Segmentation, Paging, 32 and 64 bit architecture Examples; Virtual Memory- Demand Paging, Page Replacement, Allocation, Thrashing; Allocating Kernel Memory, OS Examples.

UNIT IV I/O SYSTEMS   **9**

Mass Storage Structure- Overview, Disk Scheduling and Management; File System Storage-File Concepts, Directory and Disk Structure, Sharing and Protection; File System Implementation- File System Structure, Directory Structure, Allocation Methods, Free Space Management, I/O Systems.

UNIT V CASE STUDY   **9**

Linux System- Basic Concepts;System Administration-Requirements for Linux System Administrator, Setting up a LINUX Multifunction Server, Domain Name System, Setting Up Local Network Services; Virtualization- Basic Concepts, Setting Up Xen,VMware on Linux Host and Adding Guest OS.

Course Code: BSCS1240	Object Oriented Programming with C++	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES:

To get a clear understanding of object-oriented concepts.

• To understand object oriented programming through C++.

COURSE OUTCOME:

Upon successful completion of this course, Student will be able to

1. Gain the basic knowledge on Object Oriented concepts.

2. Develop applications using Object Oriented Programming Concepts

3. Demonstrate the differences between traditional imperative design and objectoriented design

4. Explain class structures as fundamental, modular building blocks

5. Understand the role of inheritance, polymorphism, dynamic binding and generic structures in building reusable code

6. Write small/medium scale C++ programs with simple graphical user interface

7. Understand the file handling and error handling machanisms in C++

8. Get knowledge to use strings and Streams in C++

9. Implement features of object oriented programming to solve real world problems

COURSE CONTENT:

Unit – I: STRUCTURED PROGRAMMING – I   9
Programming Languages – Programming Paradigms - Background of C++ - First Program in C++ - Structure of C++ Program - Data Types - Basic Data Types – User Defined Data Types– Expressions – Tokens, Keywords and Identifiers – Constants and Variables - Operators– Statements – Assignment - Input Output Objects – Manipulators -Control Structures – Selection Statement – Iteration Statements – Arrays and Strings.

Unit – II: STRUCTURED PROGRAMMING - II   9
Structures, Unions and Enumerations – Functions – Function Prototyping – Call by Value, Call by Reference- Inline Functions- Recursion - Pointers - Default Arguments - Passing arrays to Functions – Passing Structures to Functions – Function Overloading – Using Pointers as Function Arguments and Parameters - File I/O – File Classes – File Operations – Random Access

Unit – III: CLASSES AND OBJECTS   9
Characteristics of Object Orient Programming - Classes and Objects – Data Members - Member Functions - Constructors and Destructors – Friend Functions – Friend Classes – Static Class Members – Object Pointers.

Unit – IV: INHERITANCES AND POLYMORPHISM   9

Operator Overloading – Inheritance – Protected Members – Inheriting Multiple Base Classes – Virtual Base Classes – Polymorphism – Virtual Functions – Virtual Base Classes – Dynamic versus Static Binding.

Unit – V: TEMPLATES AND EXCEPTION HANDLING   9

Templates – Generic Functions – Applying Generic Functions – Generic Classes - Exception handling – Standard Template Library – Container Classes – Lists – Maps – Algorithms – String.

Course Code: BSCS1221	Data Structure and Algorithm Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:
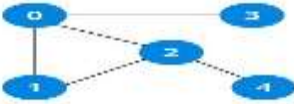

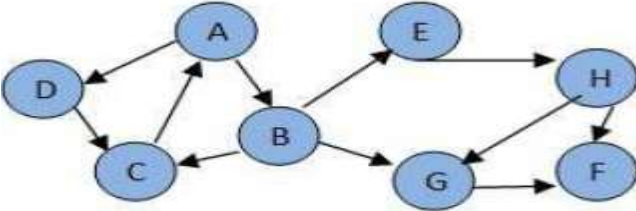

1. To develop skills to design and analyze simple linear and non linear data structures
2. To Strengthen the ability to identify and apply the suitable data structure for the given real world problem
3. To Gain knowledge in practical applications of data structures .

COURSE OUTCOME:

Upon successful completion of this course, students will be able to
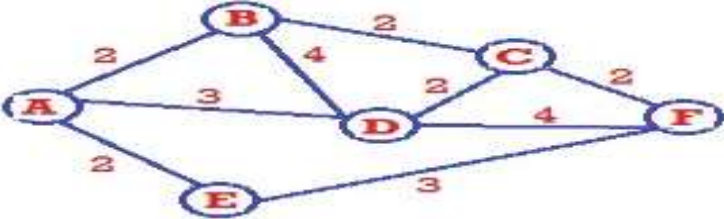

1. Design and analyze the time and space efficiency of the data structure

2. Capable to identity the appropriate data structure for given problem

3. Get practical knowledge on the application of data structures

4. Implement linked list data structure to solve various problems.

5. Apply graph and tree traverse technique to various applications.

6. Implement Dijkstra‟s algorithm, Btrees and hash tables.

7. Understand and apply various data structure such as stacks, queues, trees and graphs to solve various computing problems using C-programming language.

	postfix expressions. Write two functions Intopo() and Potopr() to accept an infix expression and convert it from infix from postfix notation and postfix to prefix notation. Test the program with the following example. (A+B)*(C-D)^2*((I-J)^6).	
12.	Using Divide and Conquer Strategy, write a c program to perform sorting on the following list given. (Hint: Quick Sort procedure shall be used) 23, 12, 4,109, 34, 55, 77, 11, 6, 55,111, 33.	
13.	Using Divide and Conquer Strategy, write a C program to perform sorting on the following list given. (Hint: Insertion Sort procedure shall be used) 23, 12, 4,109, 34, 55, 77, 11, 6, 55,111, 33.	
14.	Using Divide and Conquer Strategy, create a C program to perform sorting on the following list given. (Hint: Selection Sort procedure shall be used) 23, 12, 4,109, 34, 55, 77, 11, 6, 55,111, 33.	
Value Added List of Experiments		
15	Write a program in C to implement Dijkstra's shortest path algorithm for a givendirected graph. Shortest path finding using Dijkstra's Algorithm	
16	Write a C program for bubble sort. Apply bubble sort algorithm for the following list of elements: 5 1 12 -5 16 10 -3 -9 9	

Course Code: BSCS1241	Object Oriented Programming with C++ Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

To make the student learn an object oriented way of solving problems.

1. To make the student to identify and practice the object-oriented programming
2. concepts and techniques. To practice the use of C++ classes and class libraries, modify existing C++ classes.
3. To develop C++ classes for simple applications

COURSE OUTCOME:

Upon successful completion of this course, students will be able to

1. Apply object-oriented programming features to program design and implementation

2. Understand object-oriented concepts and how they are supported by C++

3. Understand implementation issues related to object-oriented techniques.

4. Analyze, use, and create functions, classes, to overload operators.

5. Use inheritance and Pointers when creating or using classes and create templates

6. Understand and use Exception handling and file handling mechanism.

S.No	Title of Lab Experiments
1	Demonstration of C++ Programs to Implement Various Control Structures. a. If statement b. Switch case statement and do while loop c. For loop d. While loop
2	Demonstration of Programs to Understand Structure & Unions. a. Structure b. union
3	Demonstration of Programs to Understand Pointer Arithmetic using C++.
4	Demonstration of Functions & Recursion using C++.
5	Design and implementation of Inline Functions in C++.
6	Demonstration and implementation of Programs to Understand Different Function Call Mechanism using C++. a. Call by reference b. Call by Value

7	Implementation of Programs to Understand Storage Specifiers in C++
8	Demonstration of Constructors & Destructors in C++
9	Demonstration of Use of "this" Pointer Using class
10	Programs to Implement Inheritance and Function Overriding. a. Multiple inheritances –Access Specifiers b. Hierarchical inheritance – Function Overriding /Virtual Function
11	Programs to Overload Unary & Binary Operators as Member Function & Non Member Function. a. Unary operator as member function **b.** Binary operator as non member function
12	Programs to Understand Friend Function & Friend Class. a. Friend Function b. Friend class
13	Programs on Class Templates using C++.

Course Code:BSCS1251	Application oriented programming using Python	L	T	P	C
Version No. 01	Date of Approval:	0	0	4	2
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

The objective of this paper is to introduce various concepts of programming to the students using Python.

COURSE OUTCOME:

Upon completion of this course the student should be able to:

1. Develop Python Programs on their own
2. Understand File Processing.
3. Develop GUI.
4. Understand Client Server Programming.
5. Apply problem solving skills and implement any real world problems.

	List of Experiments
1	Implement Python script to read person's age from keyboard and display whether he is eligible for voting or not.
2	Implement Python script to find biggest number between two numbers.
3	Implement Python Script to generate prime numbers series up to n
4	Implement Python Script to check given number is palindrome or not.
5	Implement Python script to print factorial of a number.
6	Implement Python Script to perform various operations on string using string libraries
7	Implement Python Script to check given string is palindrome or not.
8	Define a function max_of_three() that takes three numbers as arguments and returns the largest of them.
9	Write a program which makes use of function to display all such numbers which are divisible by 7 but are not a multiple of 5, between 1000 and 2000.
10	Define a function which generates Fibonacci series up to n numbers
11	a) Write a program which accepts a sequence of comma-separated numbers from console and generate a list and a tuple which contains every number. Suppose the following input is supplied to the program:34,67,55,33,12,98. Then, the output should be: ['34', '67', '55', '33', '12', '98'] ('34', '67', '55', '33', '12', '98'). b) With a given tuple (1,2,3,4,5,6,7,8,9,10), write a program to print the first half values

	in one line and the last half values in one line.
12	a) Write a python script to perform basic dictionary operations like insert, delete and display. b) Write a python script to find frequency of words in a file using dictionaries.
13	a) Write Python script to display file contents. b) Write Python script to copy file contents from one file to another.

Course Code: SLBC1002	Professional Communication	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES :

1. Advance leadership knowledge and skills based upon communication principles.
2. Increase understanding of relating to others at work.
3. Improve knowledge and skills in characteristics of effective collaboration
4. Develop awareness of managing time and wellness in the workplace
5. Develop verbal and written presentation skills.

COURSE OUTCOMES :

Upon completion, successful students will be able to

1. Send and interpret verbal and nonverbal messages with accuracy and effectiveness.
2. Recognize differences that impact members of an organization and enact appropriate communication strategies to help attain diversity.
3. Prepare personal career goals.
4. Develop communication and critical thinking skills necessary for securing a job and succeeding in the diverse, ever-changing workplace.
5. Demonstrate knowledge of leadership styles and approaches
6. Build positive interpersonal relationships in the workplace.
7. Plan and conduct an interview in both interviewee and interviewer roles.
8. Distinguish groups and teams and recall communication factors that influence the effective development of teams.
9. Demonstrate competence in making a decision as a team.
10. Identify and overcome common obstacles in group meetings.
11. Demonstrate knowledge of leadership and problem solving communication in teams.
12. Create and deliver a business presentation.
13. Anticipate and respond to questions during a presentation.
14. Plan and create proper business documents.
15. Demonstrate knowledge of research and theories regarding wellness in the workplace.
16. Demonstrate awareness and knowledge of workplace ethics.
17. Demonstrate knowledge of workplace and professional etiquette.

COURSE CONTENT:

Unit I:Basics of Technical Communication   9 lecture hours
Technical Communication: features; Distinction between General and Technical communication; Language as a tool of communication; Levels of communication: Interpersonal, Organizational, Mass communication; The flow of Communication: Downward, Upward, Lateral or Horizontal (Peer group); Importance of technical communication; Barriers to Communication.

Unit II: Constituents of Technical Written Communication   8 lecture hours

Words and Phrases: Word formation. Synonyms and Antonyms; Homophones; Select vocabulary of about 500-1000 New words; Requisites of Sentence Construction: Paragraph Development: Techniques and Methods -Inductive, Deductive, Spatial, Linear, Chronological etc; The Art of Condensation- various steps.

Unit III: Forms of Technical Communication   **8 lecture hours**
Business Letters: Sales and Credit letters; Letter of Enquiry; Letter of Quotation, Order, Claim and Adjustment Letters; Job application and Resumes. Official Letters: D.O. Letters; Govt. Letters, Letters to Authorities etc. Reports: Types; Significance; Structure, Style & Writing of Reports. Technical Proposal; Parts; Types; Writing of Proposal; Significance. Technical Paper, Project. Dissertation and Thesis Writing: Features, Methods & Writing.

Unit IV: Presentation Strategies   **7 lecture hours**
Defining Purpose; Audience & Locale; Organizing Contents; Preparing Outline; Audio-visual Aids; Nuances of Delivery; Body Language; Space; Setting Nuances of Voice Dynamics; Time- Dimension.

Unit V: Fundamentals of Human Relations: **8 lecture hours**
Intra-personal, Interpersonal and Group Relationships, Transactional Analysis Implications for Managers in Organizational Context. Formal Written Communication: Official Letters, Report, Writing: Categories Formats, Memorandums and Circulars, Agenda and Minutes, Resume, Drafting Advertisements. Enquires and Replies, Quotations, Voluntary Offers, Placing of Order, Cancellation of Order, Complains and Adjustments. Formal Verbal Communication: Group Discussion, Interview, Extempore, Business Negotiation, Public Speaking, Meeting, Toasting, Counselling, Business Presentation. Negotional Skills. Social Skills for Managers: Update of Etiquettes a Manager should observe in Various Formal and Informal Situations; The Knowledge of Body Language.

Text Books

1 Improve Your Writing ed. V.N. Arora and Laxmi Chandra, Oxford Univ. Press, New Delhi .
2 Technical Communication – Principles and Practices by Meenakshi Raman &Sangeeta Sharma, Oxford Univ. Press 2007, New Delhi.

Reference Books

1 Effective Technical Communication by Barun K. Mitra, Oxford Univ. Press, 2006, Delhi.

COURSE CONTENT:

Course Description

Knowledge ofJapaneseLanguageis essential andvaluableinthefieldofallengineering & science streams .Knowledge ofJapanesewillhelpengineeringstudentstowiden theirhorizonsandwillopenupnewavenuesforhighereducation in Japan. ForeignLanguageTeachingwillalso make the students multi-disciplinary and not focusing only on science Subjects. Thus,itisthe steppingstonein theprocessofcreating professionalswith aglobaloutlookandoutreach.Inaglobalizedworld,understandingofotherculturesconstitutesanimportantcompo nentofsoft skills.Thiscanbeenhancedbyforeignlanguageteaching.Thiswillalsopromoteaninterdisciplinaryapproachinstu dents.

Course Objectives

1. Thiscourseattemptstogivethestudents a workingknowledgeof JapaneseLanguagewithemphasisoncommunicativecompetence.
2. Thiscourse will introduce reading and writing Japanese scripts, Hiragana and Katakana.
3. BasicJapanesesentenceswillbeintroducedandpracticed thoroughly.
4. Sufficientvocabularywillbegiventothestudentsto enable them to use the language patterns taught in various contexts.
5. This course aims to give the students an interdisciplinary approach in order to compete in the globalized world.
6. Thiscoursewillexposethestudentstoanewculturewhichpromotesrespect forthe'others'and inculcates tolerance.

Course Pre-requisite :   Communicative Japanese -I
Course Outcomes

1. Oncompletionofthecourse,thestudentswillbeabletoread and write Hiragana and Katakana; speakshort sentences and answer questions in Japanese.
2. Theywill beable to read short passages written in Hiragana.
3. They will acquire a basic understandingofJapanesesocietyandculture.

Course Code: BSCS1231	Operating Systems Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure	Unix				
Co-requisites					

LIST OF EXPERIMENTS:

1. Write shell programs using 'case', 'then' and 'if' & 'else' statements.
2. Write shell programs using while, do-while and for loop statements.
3. Write a program to create a child process using fork(), exec() system calls and use other system calls.
4. Write a program to convert upper case to lower case letters of a given ASCII file.
5. Write a program to program to search the given pattern in a file.
6. Write a program to implementation of Signals in UNIX.
7. Write a program to simulate UNIX commands like ls, grep, cp.
8. Write a program to demonstrate FCFS and SJF process schedules on the given data.
9. Write a program to demonstrate CPU Priority and Round Robin Scheduling on the given burst time and arrival times.
10. Write a program to simulate Inter Process Communication using pipes.
11. Write a program to implementing Producer and Consumer problem using Semaphores.
12. Write a program tosimulate Bankers Algorithm for Dead Lock Avoidance
13. Write a program tosimulate Bankers Algorithm Dead Lock Prevention.
14. Write a program tosimulate Paging Techniques of memory management.
15. Write a program tosimulate FIFO, LRU, LFU Page replacement algorithms.
16. Write a program tosimulate Sequential, Indexed, and Linked file allocation strategies.

SOFTWARE REQUIRED:

➢ Recommended to use Open Source Software like Fedora, Ubuntu, CentOS, etc...
➢ Recommended to write programs using C / C++ on Linux systems.

II Year
SEMESTER-III

Course Code:BSCS2310	**Engineering Economics and Management**	L	T	P	C
Version No. 01	**Date of Approval:**	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OUTCOMES:

The course is intended to provide basic understanding of Economics and Management to engineering students with following aspects:

To impart knowledge, with respect to concepts, principles and practical applications of Economics, which govern the functioning of a firm/organization under different market conditions.

To help the students to understand the fundamental concepts and principles of management; the basic roles, skills, functions of management, various organizational structures and basic knowledge of marketing.

COURSE OUTCOME:

After learning the course the students should be able to:

 1. Students will describe basic concepts of Metrology.

 2. Students will select linear measuring instrument for measurement of various components.

 3. Students select angular and taper measurement devices for measurement of various components.

 4. Students will discriminate between various screws by measuring their dimensions.

 5. Students will separate different gears through measurement of various dimensions of gears.

 6. Students will discriminate capabilities of machining process by measuring surface finish of the component produced

 7. Students will evaluate quality of surface produced using various methods.

 8. Students will describe basic concepts of mechanical measurement and errors in measurements.

 9. Students will select appropriate temperature measuring device for various applications.

 10. Students will describe methods of measurement for various quantities like force, torque, power, Displacement, velocity/seed and acceleration.

COURSE CONTENT:

Unit I   9 hours

Introduction to Economics; Definitions, Nature, Scope, Difference between Micro economics &Macro economics. Theory of Demand & Supply; meaning, determinants, law of demand, law of supply, equilibrium between demand & supply Elasticity; elasticity of

demand, price elasticity, income elasticity, cross elasticity.

Unit II: 9 hours

Markets; meaning, types of markets & their characteristics (Perfect Competition, Monopoly, Monopolistic Completion, Oligopoly).- National Income; meaning, stock and flow concept, NI at current price, NI at constant price, GNP, GDP, NNP,NDP, Personal income, disposal income.

Unit III: 9 hours

Introduction to Management; Definitions, Nature, scope Management & Administration, skill, types and roles of managers, Management Principles; Scientific principles,Administrative principles, Maslow's Hierarchy of needs theory - Functions of Management; Planning, Organizing, Staffing, Directing and Controlling.

Unit IV: 9 hours

Introduction to Marketing management; Marketing Mix, concepts of marketing, demand forecasting and methods, market segmentation- Introduction to Finance Management; meaning, scope, sources, functions.

Unit V: 9 hours

Introduction to Production Management; definitions, objectives, functions, plant layout-plant location- Introduction to Human Resource Management; definitions, objectives of manpower planning, process, sources of recruitment, process of selection.

Reference Books:

1. Engineering Economics, R.Paneerselvam, PHI publication

2. Fundamentals of Management: Essential Concepts and Applications, Pearson Education, Robbins S.P. and Decenzo David A.

3. Economics: Principles of Economics, N Gregory Mankiw, Cengage Learning

4. Principles and Practices of Management by L.M.Prasad
5. Principles of Management by Tripathy and Reddy
6. Modern Economic Theory, By Dr. K. K. Dewett& M. H. Navalur, S. Chand Publications

Course Code: BSCS2320	Database Management System	L	T	P	C
Version No. 01		3	1	0	4
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

To educate students with fundamental concepts of Data Base Management System,Data Models, Different Data Base Languages.

COURSE OUTCOME

 Upon successful completion of this course, students will be able to

1. Analyze Database design methodology and Acquire knowledge in fundamentals of Data Base Management System.

2. Analyze the difference between traditional file system and DBMS and Handle with different Data Base languages.

3. Draw various data models for Data Base and Write queries mathematically and Design data base and normalize data and Understand how query are being processed and executed.

4. Deal with online transactions and control Concurrency.

5. Understand types of Data Base failures and Recovery.

COURSE CONTENT:

Unit I Introduction   9

Introduction: An overview of database management system- database system vs file system-Database system concept and architecture- data model schema and instances- interfaces-DDL-DML-Overall Database Structure.

Unit II ERModeling& SQL   9
Data Modellingusing the Entity Relationship Model: ER model concepts-notation for ER diagram-mapping constraints- keys- Concepts of Super Key- candidate key-primary key-Generalization-aggregation-reduction of an ER diagrams to tables-extended ER model-Relational Algebra-Introduction to SQL-Basic Queries – Complex SQL Queries – Views

Unit III Database Normalization   9
Functional dependencies-normal forms- first- second- third normal forms- BCNF- inclusion dependence- loss less join decompositions

Unit IV Transaction Processing Concept   9

Transaction system- Testing of serializability - serializability of schedules- conflict & view serializable schedule- recoverability-Recovery from transaction failures- log based recovery- checkpoints-deadlock handling.

Unit V: Concurrency Control Techniques   9

Concurrency control-Locking Techniques for concurrency control-Time stamping protocols for concurrency control- validation based protocol- multiple granularity

Text Book:

Course Code: BSCS2330	Java Programming		L	T	P	C
Version No. 01	Date of Approval:		3	0	0	3
Prerequisite/Exposure						
Co-requisites						

COURSE OBJECTIVE

To introduce students to the Java programming language.

1. To create Java programs that leverage the object-oriented features of the Java.
2. language, such as encapsulation, inheritance and polymorphism; use data types, arrays and other data collections;
3. To implement I/O functionality to read from and write to text files.

COURSE OUTCOMES:

Upon successful completion of this course, student will be able to

1. Understanding of the principles and practice of object oriented analysis and design in the construction of robust, maintainable programs which satisfy their requirements;

2. Implement, compile, test and run Java programs comprising more than one class, to address a particular software problem.

3. Demonstrate the principles of object oriented programming;

4. Understand the concept of package, interface, multithreading and File handling in java.

5. Use members of classes found in the Java API (such as the Math class).

COURSE CONTENT:

Unit I:Introduction: **9 lecture hours**
Introduction - Object oriented fundamentals, History-Java and the Internet-Java Applets and Applications, Features of Java, Java Virtual Machine (JMV), Byte-Code ,JAVA buzzwords, JAVA Environments, Command Line Arguments, Java program structure, Reserved keywords, Identifiers, Literals, Operators, Separators, Variables, Declaring a variable, Scope and lifetime of variables, Data types, Type conversion, casting.

Unit II: **8 lecture hours**

Control Statements, Arrays- One-Dimensional Arrays, Two-dimension Array, Vectors, Operators- Arithmetic, Boolean logical, Relational and Bitwise operators-Operator Precedence. Class :Fundamentals ,The General Form of a Class ,A Simple Declaring Objects, Assigning Object Reference Variables, Methods: Overloading Methods, Using Objects as Parameters, A Closer Look at Argument Passing ,Returning Objects, Recursion Introducing Access Control, Overriding Methods, Final Variables and Methods, Final class, Finalizer Methods, Abstract Methods and Class, Visibility Control, Constructors

Unit III: **8 lecture hours**
String : Strings, String Constructors, String length, String Literals, String Concatenation, data types-String conversion. Inheritance : basic,Types of Inheritance, Member Access, Creating a Multilevel

Hierarchy, When Constructors Are Called Method Overriding, Why Overridden Methods?, Abstract Classes, Using final with Inheritance, Using final to Prevent Overriding . Using final to Prevent Inheritance, Packages and Interfaces.

Unit IV: **7 lecture hours**
Exception Handling: Exceptions Exception hierarchy, Try, Catch, Finally, Throw.

Unit V: **8 lecture hours**
Java.io Package-I/O Basics-Reading console Input-Writing console output Print Writer class -Reading and Writing files-Java I/O classes, Byte Stream Classes, Character Stream.

Text Books

 1. R. Naughton and H. Schildt – Java2 (The Complete Reference) – Fifth Edition – TMH – 2004.

3. Bruce Eckel –Thinking in Java – Prentice Hall, 2nd Ed 2002.

Course Code: BSCS2340	Computer Graphics		L	T	P	C
Version No. 01	Date of Approval:		3	0	0	3
Prerequisite/Exposure						
Co-requisites						

COURSE OBJECTIVES

This course is designed to provide a comprehensive introduction to computer

1. Graphics leading to the ability to understand contemporary terminology, progress, issues, and trends.

COURSE OUTCOME:

Upon successful completion of this course, students will be able to

BSCS2340.1	1. Demonstrate an understanding of contemporary graphics hardware.
BSCS2340.2	2. Demonstrate an understanding of geometrical 2D transformations.
BSCS2340.3	3. Demonstrate an understanding of geometrical 3D transformations.
BSCS2340.4	4. Understands about the computer graphics applications
BSCS2340.5	5. Understands about the some more computer graphics applications

COURSE CONTENT:

UNIT I   INTRODUCTION   9 Hours

Overview of Graphics System - Bresenham technique – Line Drawing and Circle Drawing Algorithms - DDA - Line Clipping - Text Clipping.

UNIT II 2D TRANSFORMATIONS   9 Hours

Two dimensional transformations – Scaling and Rotations - Interactive Input methods - Polygons - Splines – Bezier Curves - Window view port mapping transformation.

UNIT III 3D TRANSFORMATIONS   9 Hours

3D Concepts - Projections – Parallel Projection - Perspective Projection – Visible Surface Detection Methods - Visualization and polygon rendering – Color models – XYZ-RGB-YIQ-CMY-HSV Models - animation – Key Frame systems - General animation functions - morphing.

UNIT IV Application – I   9 Hours

Multimedia hardware & software - Components of multimedia – Text, Image – Graphics – Audio – Video – Animation – Authoring.

UNIT V Application – II   9 Hours

Multimedia communication systems – Data base systems – Synchronization Issues – Presentation requirements – Applications – Video conferencing – Virtual reality – Interactive video – video on demand

TEXT BOOK:

1. Hearn D and Baker M.P, "Computer graphics – C Version", 2nd Edition, Pearson Education, 2004(unit 1, 2 & 3)

2. Ralf Steinmetz, Klarasteinmetz, "Multimedia Computing, Communications and Applications", Pearson education, 2004 (Unit 4 & 5)

REFERENCES:

1. Siamon J. Gibbs and Dionysios C. Tsichritzis, "Multimedia programming", Addison Wesley, 1995.

2. John Villamil, Casanova and LeonyFernanadez, Eliar, "Multimedia Graphics", PHI, 1998.

Course Code: BSCS2350	Design and Analysis of Algorithms	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

1 To understand and apply the algorithm analysis techniques.
2 To critically analyze the efficiency of alternative algorithmic solutions for the same problem
3 To understand different algorithm design techniques.
4 To understand the limitations of Algorithmic power.

OUTCOMES:

At the end of the course, the students should be able to:

1 Design algorithms for various computing problems.
2 Analyze the time and space complexity of algorithms.
3 Critically analyze the different algorithm design techniques for a given problem.
4 Modify existing algorithms to improve efficiency.

COURSE CONTENT:

UNIT I INTRODUCTION   9 Hrs

Notion of an Algorithm – Fundamentals of Algorithmic Problem Solving – Important Problem Types –
Fundamentals of the Analysis of Algorithmic Efficiency –Asymptotic Notations and their properties.
Mathematical analysis for Recursive and Non-recursive algorithms.

UNIT II BRUTE FORCE AND DIVIDE-AND-CONQUER   9 Hrs

Brute Force – Computing an – String Matching – Travelling Salesman Problem – Knapsack Problem –
Assignment problem. Divide and Conquer Methodology – Binary Search – Merge sort – Quick sort –
Heap Sort – Multiplication of Large Integers.

UNIT III DYNAMIC PROGRAMMING AND GREEDY TECHNIQUE   9 Hrs

Dynamic programming – Principle of optimality – Computing a Binomial Coefficient – Floyd's
algorithm – Optimal Binary Search Trees   – Knapsack Problem and Memory functions. Greedy
Technique – Prim's algorithm and Kruskal's Algorithm – 0/1 Knapsack problem, Optimal Merge pattern
– Huffman Trees.

UNIT IV ITERATIVE IMPROVEMENT   8 Hrs

The Simplex Method – The Maximum- Flow Problem – Maximum - Stable marriage Problem.

UNIT V COPING WITH THE LIMITATIONS OF ALGORITHM POWER   10 Hrs

Lower – Bound Arguments – P, NP NP- Complete and NP Hard Problems. Backtracking –   n-Queen
problem –Subset Sum Problem. – LIFO Search and FIFO search – Approximation Algorithms for NP-
Hard Problems – Travelling Salesman problem – Knapsack problem.

Course Code:BSCS2321	DATABASE MANAGEMENT SYSTEMS LAB	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

The student should be made to:
1. Learn to create and use a database.
2. Be familiarized with a query language.
3. Have hands on experience on DDL Commands.
4. Have a good understanding of DML Commands and DCL commands.
5. Familiarize advanced SQL queries.
6. Be exposed to different applications.

OUTCOMES:

At the end of the course, the student should be able to:

1. Design and implement a database schema for a given problem-domain.
2. Populate and query a database
3. Create and maintain tables using PL/SQL.
4. Prepare reports.

LIST OF EXPERIMENTS:

1. Creation of a database and writing SQL queries to retrieve information from the database.
2. Performing Insertion, Deletion, Modifying, Altering, Updating and Viewing records based on conditions.
3. Creation of Views, Synonyms, Sequence, Indexes, Save point.
4. Creating an Employee database to set various constraints.
5. Creating relationship between the databases.
6. Study of PL/SQL block.
7. Write a PL/SQL block to satisfy some conditions by accepting input from the user.
8. Write a PL/SQL block that handles all types of exceptions.
9. Creation of Procedures.
10. Creation of database triggers and functions
11. Mini project (Application Development using Oracle/ Mysql) (any one)
a) Student Management System.
b) Hospital Management System.
d) Railway Reservation System.
e) Personal Information System.

Course Code:BSCS2331	Java Programming Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

1. To be knowledgeable enough about basic Java language syntax and semantics to be able to successfully read and write Java computer programs;

2. To have obtained experience designing, implementing, testing, and debugging graphical user interfaces that respond to user events using Java;

COURSE OUTCOME

Upon successful completion of this course, students will be able to

1. Understand programming language concepts, particularly Java and object-oriented concepts.
2. Write, debug, and document well-structured Java applications.
3. Implement Java classes from specifications and effectively create and use objects from predefined class libraries.
4. Understand the behavior of primitive data types, object references, and arrays.
5. Apply decision and iteration control structures to implement algorithms.
6. Write simple recursive algorithms.
7. Implement interfaces, inheritance, and polymorphism as programming techniques and apply exceptions handling.

S.No.	Program List
1.	Write a Java Program to perform the arithmetic operations using switch case.
2.	Write a program to check the input character for uppercase, lowercase, no. of digits and other characters.
3.	Write a java program to find the greatest among three numbers.
4.	Write a java program that display the roots of a quadratic equation $ax2+bx=0$. Calculate the discriminate D and basing on value of D, describe the nature of root.
5.	Write a java program to implement binary search mechanism in use of following concepts (Operations, Expressions, Control-flow, Strings)
6.	Write a Java program that reads a line of integers and then displays each integer, and the sum of all the integers(Use String Tokenizer class of java.util)
7.	Write a Java Program for sorting a given list of names in ascending order.
8.	write a JAVA program to implement class mechanism. - Create a class, methods and invoke them inside main method.
9.	Write a java program to call a windows run time comments.
10.	Write a java program to calculate the area of square, rectangle and circle using method overloading.
11.	Write a java program to calculate the area of circle and cylinder using method overriding.
12.	Write a java program to calculate the area of rectangle, triangle and circle method abstract class.
13.	Write a java program that implements the concept of package creation.
14.	Write a java program that implements Interface concept using basic mathematical function.
15.	Write a java program to implements exception handling techniques and its concepts.
16.	Write a Java program that implements a multithreaded program has three threads. First thread generates a random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd the third thread will print the value of cube of the number.
17.	Write a java program to implement Inter Process (Inter Thread) Communication between classes and there by using the mutual exclusion among them to display and produce the output.
18	Create an application for color class by using Applet.
19	Create an applet application using the Key Event class and KeyListener interface.
20	create an applet application for dialog box creation using Frames
21	Create an applet application (Mouse Events) for MouseListener and MouseMotionListener interface.
22	Create an application to display the calendar of a month based on users choice of month and year.

Course Code: BSCS2341	COMPUTER GRAPHICS LAB	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

The student should be made to:
>   Understand graphics programming

Be exposed to creation of 3D graphical scenes using open graphics library suits
>   Be familiar with image manipulation, enhancement

>   Learn to create animations

>   To create a multimedia presentation/Game/Project.

OUTCOMES:

At the end of the course, the student should be able to
>   Create 3D graphical scenes using open graphics library suits

>   Implement image manipulation and enhancement

>   Create 2D animations using tools

SOFTWARE: C / C++ / Java / OpenGL

LIST OF EXPERIMENTS:

1. Implementation of Algorithms for drawing 2D Primitives – Line
    (DDA, Bresenham) – all slopes Circle (Midpoint)

2. 2D Geometric transformations –
    Translation
    Rotation Scaling
    Reflection Shear
    Window-Viewport

3. Composite 2D Transformations

4. Line Clipping

5. 3D Transformations - Translation, Rotation, Scaling.

6. 3D Projections – Parallel, Perspective.

7. Creating 3D Scenes.

8. Image Editing and Manipulation - Basic Operations on image using any image editing software,
Creating gif animated images, Image optimization.

9. 2D Animation – To create Interactive animation using any authoring tool.

Course Code: BSCS2351	Design and Analysis of Algorithms Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE

This course is designed to introduce the students to design and analyse algorithms in terms of efficiency and correctness. The course focuses on highlighting difference between various problem solving techniques for efficient algorithm design.

COURSE OUTCOMES:

On successful completion of this course, the student will be able to:

1. Given an algorithm, identify the problem it solves.

2. Write algorithms choosing the best one or a combination of two or more of the algorithm design techniques: Iterative, divide-n-conquer, Greedy, Dynamic Programming using appropriate data structures.

3. Write proofs for correctness of algorithms.

4. Re-write a given algorithm replacing the (algorithm design) technique used with a more appropriate/efficient (algorithm design) technique.

SL. NO.	EXPERIMENT NAME
1	Implementation of Sorting Algorithms i) QUICK SORT
2	Implementation of Sorting Algorithms ii) MERGE SORT
3	Implementation of Sorting Algorithms iii) HEAP SORT
4	Implementation of Binary Search Tree Algorithm
5	Implementation of Minimum Spanning Tree
6	Implementation of Knapsack Problem
7	Implementation of 8 Queen's Problem
8	Implementation of All Pair Shortest Path Algorithm
9	Implementation of Travelling Salesman Problem
10	Implementation of Graph Colouring
11	Implementation of Multistage Graphs
12	Selection Sort Using Brute Force Method

LLL235	Aptitude Building	L	T	P	C
Version 1.01	Date of Approval:	0	0	4	2
Pre-requisites/Exposure	Completion of Semester 2				
Duration	24 sessions of 120 minutes each				

Course Objectives

1. Enable students to develop verbal reasoning skills.
2. Enable students to effectively participate in Group Discussions.
3. Enable students to implement logical approach in problem solving.

Course Outcomes

At the end of this course, the learner will be:

1. Interpret the logical structure of an argument and apply the influence of emotional and figurative persuasion in the given argument
2. Evaluate an argument objectively and skillfully by analyzing and assessing it
3. Appreciate and employ the thinking for self, and the development of confidence in one's own thinking
4. Contribute in dialogue in a way that enables the students to experience and reflect upon their own thinking as it is expressed in communication with others
5. Interpret the data and develop a deeper understanding of the problems
6. Improves on one's managerial skills by interpreting the ideas effectively.
7. Develop advanced level techniques in problem solving and decision-making ability
8. Gaining useful insight into the "why" and "how" of a problem and also differentiating between relevant and irrelevant information

Text Books

SLLL own text book

Course Catalogue

It is imperative for a student to develop interpretation and analysis skills to be able to hold onto his own in this competitive world. The course thus, focuses on verbal reasoning skills- Paragraph Jumbles, Critical Reasoning alongwith the aptitude skills- Data Interpretation.

The course also enhance the students ability to participate in Group discussion which is an exercise to evaluate personality. The course aims at making students more confident in voicing their opinions in a group.

Reference Books

1. Communication Skills for Engineers, Mishra, Sunita & C. Muralikrishna, , Pearson
2. Corporate Soft skills, Sarvesh Gulati, 2006.
3. Effective Communication, John Adair , Macmillan Ltd.1997.
4. Developing Communication Skills, Krishna Mohan and Meera Bannerji, Macmillan India Ltd. 1990
5. Quicker Maths , M Tyra
6. Quantitative Aptitude, Abhijeet Guha

Course Content

Unit I: Verbal Reasoning

- Paragraph Jumbles
- Analogies
- Critical Reasoning

Unit II: Group Discussion

- Group Discussion- Concepts
- Group Discussion - Practice

Unit III: Quantitative Aptitude

- Crypto Mathematics
- Introduction to Algebra
- Set Theory
- Permutation & Combination
- Probability
- Pie Chart & Mixed Graphs
- Logical Reasoning
- Data Sufficiency
- Calendar and Clocks

Mode of Evaluation: The performance of students is evaluated as follows:

	Practical	
Components	Internal	ETE
Marks	50	50
Total Marks	100	

Name of The Course	Foreign Language:Japanese-II
Course Code	JAPA2003
Prerequisite	Japanese-I & Japanese-II
Corequisite	NA
Antirequisite	NA

	L	T	P	C
	0	0	2	1

Course Objectives:

1. This course attempts to give the students working knowledge of Japanese Language with emphasis on communicative competence.
2. This course will impart all the four skill viz. reading, writing, listening and speaking.
3. Basic Japanese sentences will be introduced and practiced.
4. Sufficient vocabulary will be given to the students to converse in a given situation such as, in a Coffee House, at the airport, in a restaurant and in the marketplace.
5. This course aims to give our students an interdisciplinary approach in order to compete with the globalized world.
6. This course will expose the students to a new culture and promote respect for the 'others' and inculcate tolerance.

Course Outcomes

CO1	Interpret simple sentences, read short sentences and paragraphs
CO2	Apply simple sentences to discuss about their family members, friends etc.
CO3	Connect with the society and culture of Japan.
CO4	Assess all the four skills: reading, writing, listening and speaking.
CO5	Create short stories in Japanese language.

Prescribed Texts

1.Shokyuu Nihongo, Japanese Language Center for International Students, Tokyo University of foreign Studies, Japan.
2. Minna-no Nihongo-2, 3A Corporation, Japan.
3. Nihongo Shoho –I, published by the Japan Foundation, Japan.
4. Shin Nihongo no kiso-1, AOTS, 3A Corporation, Japan.

Additional References

1. Random House Japanese-English Dictionary
2. Japanese for Busy people , Video CD , AJALT, Japan
.

Unit-1 Introduction	8 hours
Review of Japnese-I and Japanese-II syllabus.	
Transitive and intransitive forms of verbs	
More Verbs	
Direct and Indirect object particles	
Potential verb dekimasu, ~kotoga dekimasu	
Give verbs ageru, kureru	
Expressions suki desu, kirai desu, hoshii desu, ~ga wakarimasu,	
Use of donna+Noun,	
zenzen~masen	
1. Use of ni Arimasu, ni imasu.Practice with audio track	

Unit-2
Counters in Japanese to count objects, animals and human beings
[Conter suffix like: ~ general counting –Hitotsu futatsu.
Days of the week, dates in a month
How to say time in Japanese
Adjectives (Present,Past,Negative and Past negative)
Various expressions using the ~te form of teh verbs
Making comparative sentences (question and answer)
Introducing Kanji(Japanese Pictorial script) 1-20 Listening Practice with audio track
Class test.

Unit-3
Introducing superlative degree in Japanese
Expression of desire
Use of particle ~ni for purpose of going / coming.
~ V-tai desu
Asking permission (~temo iidesuka)
~nagara used for Simultaneous actions
(V-te kara
Direct and indirect speech
(N wa /ga …to iimasu)
Learning Kanji(Japanese Pictorial script) 21-40,
Listening practice with audio track
Class test .

Unit-4
Telling what someone thinks (N wa …to omoimasu)
Calling or naming [(N wa) X to iimasu.]
Volitional form of verbs
Probability, guessing something
(~deshoo), ~kamoshiremasen)
Conversation practice
Passive construction (~reru, ~rareru)   ,Causative construction (~seru, ~saseru)
Receiving verbs (moraimasu, itadakimasu)
Patterns using Verb in dictionary form
(tsumori)
Learning Kanji(Japanese Pictorial script) 41-60.
Listening practice audio track, Class tests

Unit-5
Expression of prohibition (~tewa ikemasen)
Expression of order (~nasai)
Expression of change from one state to another (V dic. Yoo ni naru)
(Passage reading (Kamakura)
The story behind Kanji (Passage reading),
Learning Kanji(Japanese Pictography) 81-100
Robots (Passage reading)The Obon festival (Passage reading).Letter writing (A thank you letter).Letter writing (A request letter).Listening practice audio track. Revision

Continuous Assessment Pattern

Internal Assessment (IA)	Mid Term Test (MTE)	End Term Test (ETE)	Total Marks
70		30	100

Course Code: BSCS2460	Artificial Intelligence and Machine Learning	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES
1. Build the foundation to designing intelligent agents.
2. To know the importance of the complexity of a given algorithm
3. How should and intelligent agent solve problems
4. AI search techniques, Game Playing, Planning, Knowledge Representation, Reasoning under Uncertainty and Machine Learning.

COURSE OUTCOMES
At the end of the course, students will be able to:
1. Understand the various searching techniques, constraint satisfaction problem and example problems- game playing techniques.
2. Apply these techniques in applications which involve perception, reasoning and learning.
3. Explain the role of agents and how it is related to environment and the way of evaluating it and how agents can act by establishing goals.
4. Acquire the knowledge of real world Knowledge representation.
5. Demonstrate proficiency in applying scientific method to models of machine learning.

COURSE CONTENT
Unit 1: Fundamentals of Artificial Intelligence   (9 Hrs)

Introduction, A.I. Representation, Non-AI & AI Techniques, Representation of Knowledge, Knowledge Base Systems, State Space Search, Production Systems, Problem Characteristics, types of production systems, Intelligent Agents and Environments, concept of rationality, the nature of environments, structure of agents, problem solving agents, problem formulation, Criteria for Success, Turing Test.

Unit 2: Searching   (9 Hrs)

Depth First Search, Breadth First Search, Generate & test, Hill Climbing, Best First Search, A* and AO* Algorithm, Constraint satisfaction, Means-Ends Analysis. Game playing: Minimax Search, Alpha-Beta Cutoffs, Waiting for Quiescence, Applications of Minimax Algorithm.

Unit 3: Knowledge Representation   (9Hrs)
       Knowledge based agents, Wumpus world, Propositional Logic: Representation, Inference, Reasoning Patterns, Resolution, Forward and Backward Chaining First order Logic: Representation, Inference, Reasoning Patterns, Resolution, Forward and Backward Chaining. Basics of PROLOG: Representation, Structure, Backtracking, Expert System.

Unit 4: Machine Learning Introduction and Algorithm   (9 Hrs)

Introduction to Machine Learning, Machine Learning Algorithm Hidden markov model, Genetic algorithm, SVM, Kernel functions, Linear SVM, Nonlinear SVM, Regression analysis, ensemble classifiers, Validation, evaluation.

Unit 5: Clustering Algorithm and recurrent Networks   (9 Hrs)

k-means algorithm, k-nearest neighbor learning, weighted majority algorithm, Hopefield Net, Hamming net, Maxnet, Kohonenself organizing map, Principal component Analysis (PCA), Applications of machine learning.

Course Code: BSCS2470	Cryptographic and Network Security	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

1. The learner will gain knowledge about securing both clean and corrupted systems, protect personal data, and secure computer networks.
2. The learner will understand key terms and concepts in cyber law, intellectual property and cyber crimes, trademarks and domain theft.
3. The learner will be able to examine secure software development practices.
4. The learner will understand principles of web security.
5. The learner will develop an understanding of security policies (such as confidentiality, integrity, and availability), as well as protocols to implement such policies.

COURSE OUTCOMES

On Completion of the course, the students should be able to:

1. An ability to analyze a problem, and to identify and define the computing requirements appropriate to its solution.
2. An ability to make informed judgements in computing practice based on legal and ethical principles.
3. An ability to apply security principles and practices to the environment, hardware, software, and human aspects of a system.
4. An ability to analyze and evaluate systems with respect to maintaining operations in the presence of risks and threats.
5. Understanding about the IP Security, Web Security and System Security

COURSE CONTENT:

Unit I   Introduction and Classical Encryption Technique   9 hours

OSI Security Architecture, Security Attacks, Security Services, Security Mechanism, Model for Network Security. Symmetric Cipher Model, Substitution Techniques, Transposition Techniques.

Unit II Block Ciphers, Data Encryption Standard and Advanced Encryption Standard   9hours

Block Cipher Principles, The Data Encryption Standard, Block Cipher Design Principles and Modes of operation, Evaluation Criteria for AES, AES Cipher-Encryption and Decryption, Data Structure, Encryption Round.

Unit III Public Key Cryptography, Key Management, Message,   7hours

Principles of Public Key Cryptosystem, RSA algorithm, Key management, Diffie Hellman Key exchange.

Unit IV Authentication and Hash Function   7hours

Authentication Requirement, Authentication Functions, Message Authentication Code, Hash Functions, Digital Signatures, Digital Signature Standard.

Unit V IP Security, Web Security and System Security   **10hours**

IP Security Overview; IP Security Architecture; Authentication Header; Encapsulating Security Payload; Combining Security Associations; Key Management. Web security Considerations; Secure Socket layer (SSL) and Transport layer Security (TLS);Secure Electronic Transaction (SET), Intruders, Intrusion Detection, Firewall Design Principles- Characteristics, Types of Firewall and Firewall Configuration

Text Books:

1. Cryptography and Network Security - Principles and Practice ,2017by Stallings William (Author).
2. Firewalls and Network Security Perfect Paperback – 2009 by Whitman
3. Network Security a Practical Approach Paperback – 2005 by Harrington

Course Code: BSCS2430	Computer Networks	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

• To understand the protocol layering and physical level communication.
• To analyze the performance of a network.
• To understand the various components required to build different networks.
• To learn the functions of network layer and the various routing protocols.
• To familiarize the functions and protocols of the Transport layer.

OUTCOMES:

On Completion of the course, the students should be able to:

1.Understand the basic layers and its functions in computer networks.

2. Understand the basics of how data flows from one node to another.

3. Analyze and design routing algorithms.

4. Design protocols for various functions in the network.

5. Understand the working of various application layer protocols.

COURSE CONTENT:

UNIT I   INTRODUCTION AND PHYSICAL LAYER   9hours

Networks – Network Types – Protocol Layering – TCP/IP Protocol suite – OSI Model – Physical Layer:
Performance – Transmission media – Switching – Circuit-switched Networks – Packet Switching.

UNIT II   DATA-LINK LAYER & MEDIA ACCESS   9hours

Introduction – Link-Layer Addressing – DLC Services – Data-Link Layer Protocols – HDLC – PPP –
Media Access Control – Wired LANs: Ethernet – Wireless LANs – Introduction – IEEE 802.11,
Bluetooth – Connecting Devices.

UNIT III   NETWORK LAYER   9hours

Network Layer Services – Packet switching – Performance – IPV4 Addresses – Forwarding of IP Packets
– Network Layer Protocols: IP, ICMP v4 – Unicast Routing Algorithms – Protocols – Multicasting
Basics – IPV6 Addressing – IPV6 Protocol.

UNIT IV   TRANSPORT LAYER   9hours

Introduction – Transport Layer Protocols – Services – Port Numbers – User Datagram Protocol –
Transmission Control Protocol – SCTP.

UNIT V   **APPLICATION LAYER**   **9   hours**

WWW and HTTP – FTP – Email –Telnet –SSH – DNS – SNMP.

Course Code: BSCS2440	Software Engineering	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

1. To understand the phases in a software project
2. To understand fundamental concepts of requirements engineering and Analysis Modeling.
3. To understand the various software design methodologies
4. To learn various testing and maintenance measures.

OUTCOMES:

On Completion of the course, the students should be able to:

1. Identify the key activities in managing a software project.
2. Compare different process models.
3. Concepts of requirements engineering and Analysis Modeling.
4. Apply systematic procedure for software design and deployment.
5. Compare and contrast the various testing and maintenance.
6. Manage project schedule, estimate project cost and effort required.

COURSE CONTENT:

UNIT I   SOFTWARE PROCESS AND AGILE DEVELOPMEN   9hours

Introduction to Software Engineering, Software Process, Perspective and Specialized Process Models –
Introduction to Agility-Agile process-Extreme programming-XP Process.

UNIT II   REQUIREMENTS ANALYSIS AND SPECIFICATION   9hours

Software Requirements: Functional and Non-Functional, User requirements, System requirements,
Software Requirements Document – Requirement Engineering Process: Feasibility Studies,
Requirements elicitation and analysis, requirements validation, requirements management-Classical
analysis: Structured system Analysis, Petri Nets- Data Dictionary.

UNIT III   SOFTWARE DESIGN   9hours

Design process – Design Concepts-Design Model– Design Heuristic – Architectural Design -
Architectural styles, Architectural Design, Architectural Mapping using Data Flow- User Interface
Design: Interface analysis, Interface Design –Component level Design: Designing Class based
components, traditional Components.

UNIT IV   TESTING AND MAINTENANCE   9 hours

Software testing fundamentals-Internal and external views of Testing-white box testing – basis path
testing-control structure testing-black box testing- Regression Testing – Unit Testing – Integration
Testing – Validation Testing – System Testing And Debugging –Software Implementation Techniques:

Coding practices-Refactoring-Maintenance and Reengineering-BPR model-Reengineering process model-Reverse and Forward Engineering.

UNIT V   PROJECT MANAGEMENT   **9 hours**

Software Project Management: Estimation – LOC, FP Based Estimation, Make/Buy Decision COCOMO I & II Model – Project Scheduling – Scheduling, Earned Value Analysis Planning – Project Plan, Planning Process, RFP Risk Management – Identification, Projection – Risk Management-Risk Identification-RMMM Plan-CASE TOOLS

Course Code: BSCS2450	Internet and Web Technology	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

1. To understand different Internet Technologies.
2. To learn java-specific web services architecture.

OUTCOMES:

At the end of the course, the students should be able to:

1. Construct a basic website using HTML and Cascading Style Sheets.
2. Build dynamic web page with validation using Java Script objects and by applying different event handling mechanisms.
3. Develop server side programs using Servlets and JSP.
4. Construct simple web pages in PHP and to represent data in XML format.
5. Use XML and web services to develop interactive web applications.

COURSE CONTENT:

UNIT I   WEBSITE BASICS, HTML 5, CSS 3, WEB 2.0   9hours

Web Essentials: Clients, Servers and Communication – The Internet – Basic Internet protocols – World wide web – HTTP Request Message – HTTP Response Message – Web Clients – Web Servers – HTML5 – Tables – Lists – Image – HTML5 control elements – Semantic elements – Drag and Drop – Audio – Video controls – CSS3 – Inline, embedded and external style sheets – Rule cascading – Inheritance – Backgrounds – Border Images – Colors – Shadows – Text – Transformations – Transitions – Animations.

UNIT II   CLIENT SIDE PROGRAMMING   9hours
Java Script: An introduction to JavaScript–JavaScript DOM Model-Date and Objects,-Regular Expressions- Exception Handling-Validation-Built-in objects-Event Handling- DHTML with JavaScript-JSON introduction – Syntax – Function Files – Http Request – SQL.

UNIT III   SERVER SIDE PROGRAMMING   9 hours
Servlets: Java Servlet Architecture- Servlet Life Cycle- Form GET and POST actions- Session Handling-Understanding Cookies- Installing and Configuring Apache Tomcat Web Server- DATABASE CONNECTIVITY: JDBC perspectives, JDBC program example – JSP: Understanding Java Server Pages-JSP Standard Tag Library (JSTL)-Creating HTML forms by embedding JSP code.

UNIT IV   PHP and XML   9 hours
An introduction to PHP: PHP- Using PHP- Variables- Program control- Built-in functions- Form Validation- Regular Expressions – File handling – Cookies – Connecting to Database. XML: Basic

XML- Document Type Definition- XML Schema DOM and Presenting XML, XML Parsers and Validation, XSL and XSLT Transformation, News Feed (RSS and ATOM).

UNIT V   INTRODUCTION TO AJAX and WEB SERVICES   9 hours

AJAX: Ajax Client Server Architecture-XML Http Request Object-Call Back Methods; Web Services: Introduction- Java web services Basics – Creating, Publishing, Testing and Describing a Web services (WSDL)-Consuming a web service, Database Driven web service from an application –SOAP.

LLL245	Campus to Corporate	L	T	P	C
Version 1.01	Date of Approval:	0	0	4	2
Pre-requisites/Exposure	Completion of Semester 3				
Duration	18 sessions of 100 minutes each				

Course Objectives

1. To assess the current employability level of students.

2. To prepare students to perform effectively in Personal Interview.

3. To prepare the students for solving mathematical problems appearing in Placement Papers.

Course Outcomes

At the end of this course, the learner will be:

1. Enhance and practice employability skills required in the placement process using a simulated environment
2. Communicate effectively in a Personal Interview
3. Model interpersonal communication in a monitored environment
4. Enhance the ability of problem solving and decision making in short span of time

Course Catalogue

Practice makes a man perfect – so says the wise man. The course in this semester focuses on the practicing soft skills in a simulated corporate environment providing thematic learning. The students prepare and practice participation in mock interviews – general, technical and HR, which provide a holistic environment for a student's final preparation. The students practice data analysis and reasoning skills for the purpose of solving complicated mathematical problems.

Text Book

SLLL own text book

Reference Books

1. Delivering Employability Skills in the Lifelong Learning Sector by Ann Gravells, ISBN-10: 1844452956

2. Sample Papers of Various companies

3. Real world HR interviews from companies across various sectors like IT, ITES, Manufacturing, etc. in and around NCR region.

Course Content

Unit I: Thematic Learning- Employability Skills- Job Fair   12 lectures

- Introduction to Job Fair
- Resume Writing
- Personal Interview Concepts
- Mock Interviews
- Job Fair – Final Event

Unit II: Quantitative Aptitude   6 lectures

- Syllogism
- Logical Reasoning
- Paper Pattern Discussion

Mode of Evaluation: The performance of students is evaluated as follows:

	Theory	
Components	Internal	SEE
Marks	50	50
Total Marks	100	

Course Code: BSCS2461	Artificial Intelligence and Machine Learning Using Python Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

This course introduces the basic concepts and techniques of Artificial Intelligence (AI).

The course aims to introduce intelligent agents and reasoning, heuristic search techniques, game playing, knowledge representation, reasoning with uncertain knowledge.

COURSE OUTCOMES:

On successful completion of this course, students will be able to:

1. Identify problems that are amenable to solution by specific AI methods
2. Represent knowledge in Prolog and write code for drawing inferences.
3. Identify appropriate AI technique for the problem at hand.
4. Compare strengths and weaknesses of different artificial Intelligence techniques.
5. Sensitive towards development of responsible Artificial Intelligence.

LIST OF PRACTICAL

1. Implement Non-AI and AI Techniques

2. Implement any one Technique from the following

    a. Best First Search & A* algorithm

    b. AO* algorithm

c. Hill Climbing

3. Implement Constraint Satisfaction Algorithm

4. Expert System in Prolog

5. Implement any two Player game.

      Simulate Blocks world problem using goal stack planning

6. Implementation of learning algorithms like Find S algorithm, Version space and the candidate elimination algorithm, list then eliminate algorithm for simple real world problems.

7. Implementation of learning algorithms like Back propagation algorithm, Support Vector Machines for real time problems.

8. Implementation of algorithms like Evaluating hypothesis accuracy, Sampling theory, Central limit theorem, hypothesis testing, for real time problems.

9. Implementation of learning algorithms like Bayesian Learning for real time problems.

10. Implementation of learning algorithms like weighted majority algorithm, Instance BasedLearning: k-nearest neighbour learning, locally weighted regression for real time problems.

11. Implementation of learning algorithms like Genetic Algorithms for real time problems.

12. Implementation of learning algorithms like unsupervised or reinforcement learning forreal time problems.

Course Code: BSCS2471	Cryptographic and Network Security Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

LIST OF EXPERIMENTS:

1. Implement the following SUBSTITUTION & TRANSPOSITION TECHNIQUES concepts:

      1. Caesar Cipher

      2. Playfair Cipher

      3. Hill Cipher

      4. Vigenere Cipher

      5. Rail fence –row & Column Transformation

2. Implement the following algorithms

      1. DES
      2. RSA Algorithm
      3. Diffie-Hellman
      4. MD5
      5. SHA-1

3. Implement the Signature Scheme -Digital Signature Standard

Course Code: BSCS2431	Computer Networks Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

This course covers the concepts of data communication and computer networks.

It comprises of the study of the standard models for the layered protocol architecture to communicate between autonomous computers in a network and also the main features and issues of communication protocols for different layers. Topics covered comprise of introduction to OSI and TCP/IP models also.

COURSE OUTCOMES:

On successful completion of the course, the student will be able to:

1. Describe the hardware, software components of a network and their interrelations.

2. Compare OSI and TCP/IP network models.

3. Describe, analyze and compare different data link, network, and transport layer protocols.

4. Design/implement data link and network layer protocols in a simulated networking environment.

LIST OF EXPERIMENTS:

1. Write a socket Program for Echo/Ping/Talk commands.

2. Create a socket (TCP) between two computers and enable file transfer between them.

3. Create a socket (UDP) between two computers and enable file transfer between them.

4. Write a program to implement Remote Command Execution. (Two M/Cs may be used)

5. Write a code simulating ARP /RARP protocols.

6. Create a socket for HTTP for web page upload and download.

7. Write a program for TCP module implementation.(TCP services)

8. Write a program for File Transfer in client-server architecture using following methods.   (a) RS232C
(b) TCP/IP

9. Write a program to implement RMI (Remote Method Invocation)

10. Perform a case study about the different routing algorithms to select the network path with its optimum and economical during data transfer. i. Shortest path routing ii. Flooding iii. Distance vector

11. Implement client in C and server in Java and initiate communication between them.

Course Code: BSCS2441	Software Engineering Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

The course introduces the students to different types of operating systems. Operating system modules such as memory management, process management and file management are covered in detail.

COURSE OUTCOMES:

On successful completion of the course, the students will be able to:

1. Implement multiprogramming, multithreading concepts for a small operating system.
2. Create, delete, and synchronize processes for a small operating system.
3. Implement simple memory management techniques.
4. Implement CPU and disk scheduling algorithms.
5. Use services of modern operating system efficiently
6. Implement a basic file system.

COURSE CONTENT:

1. Prepare a SRS document in line with the IEEE recommended standards.
2. Draw the use case diagram and specify the role of each of the actors.
   Also state the precondition, post condition and function of each use case.
3. Draw the activity diagram.
4. Identify the classes. Classify them as weak and strong classes and draw the class diagram.
5. Draw the sequence diagram for any two scenarios.
6. Draw the collaboration diagram.
7. Draw the state chart diagram.
8. Draw the component diagram.
9. Perform forward engineering in java. (Model to code conversion)
10. Perform reverse engineering in java. (Code to Model conversion)
11. Draw the deployment diagram

Course Code: BSCS2451	Internet and Web Technology Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

This course introduces the protocols used in Internet, its architecture, and security aspect of Internet. Student will have an insight that how a search engine works and web crawls.

COURSE OUTCOMES:

On successful completion of the course, students will be able to:

1. Describe Internet, its architecture, services and protocol.
2. Implement a simple search engine.
3. Implement a web crawler.
4. Use JavaScript technologies to make a website highly responsive, more efficient and user friendly.

S. No	List of Experiments
1	Create a web page with the following using HTML i) To embed a map in a web page ii) To fix the hot spots in that map iii) Show all the related information when the hot spots are clicked.
2	Create a web page with the following. i) Cascading style sheets. ii) Embedded style sheets. iii) Inline style sheets. Use our college information for the web pages.
3	Create and save an XML document at the server, which contains 10 users Information. Write a Program, which takes user Id as an input and returns the User details by taking the user information from the XML document.
4	Write programs in Java using sockets to implement the following: i) HTTP request ii) FTP
5	Write programs in Java using sockets to implement the following: i) SMTP ii) POP3

6	Write a program in Java for creating simple chat application with datagram sockets and datagram packets.
7	Write programs in Java using Servlets: i) To invoke servlets from HTML forms ii) To invoke servlets from Applets
8	Write programs in Java to create three-tier applications using servlets for conducting on-line examination for displaying student mark list. Assume that student information is available in a database which has been stored in a database server.
9	Write a program to lock servlet itself to a particular server IP address and port number. It requires an init parameter key that is appropriate for its servlet IP address and port before it unlocks itself and handles a request
10	i) Session tracking using hidden form fields and Session tracking for a hit count ii) Convert the static web pages into dynamic web pages using servlets (or JSP) and cookies.
11	Implement a simple program using following frameworksi) JSP Struts Framework ii) Hibernate iii). Spring
12	Explore an application in AJAX

III Year
SEMESTER-V

Course Code: BSCS3510	**Open Source Technologies**	L	T	P	C
Version No. 01	**Date of Approval:**	**3**	**0**	**0**	**3**
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

The objective of this course is to utilize and contribute to open source projects.

To make the students to gain experience using open source tools, languages and frameworks to prepare for careers in software development.

COURSE OUTCOME

Upon successful completion of this course, students will be able to

1. Understand the Open source Principles and Free software

2. Get knowledge about the methodology and Languages used to develop open source products

 3. Demonstrate the Infrastructure services

4. Ability to understand the concept of Wordpress – Moodle – Android Application Development

5. Acquire knowledge about open source desktop and different type of vendors

6. Understand about the research and indexed publication.

COURSE CONTENT:

Unit I   **9hours**
Introduction: Open Source – Open Source vs. Commercial Software – What is Linux? - Free Software – Where I can use Linux? Linux Kernel – Linux Distributions

Unit II   **9 hours**
Introduction: Linux Essential Commands – Files System Concept – Standard Files – The Linux Security Model – Vi Editor – Patitions creation – Shell Introduction – String Processing – Investigating and Managing Processes – Network Clients – Installing Application

Unit III   **9 hours**
Introduction **–** Apache Explained – Starting, Stopping, and Restarting Apache – Modifying the Default Configuration – Securing Apache – Set User and Group – Consider Allowing Access to Local Documentation – Don't Allow public_html Web sites – Apache control with .htaccess

Unit IV   **9 hours**
Introduction to MY SQL **–** The Show Databases and Table – The USE command – Create Database and Tables – Describe Table – Select, Insert, Update, and Delete statement – Some Administrative detail – Table Joins – Loading and Dumping a Database.

Unit V   **9 hours**
PHP Introduction**-** General Syntactic Characteristics – PHP Scripting – Commenting your code – Primitives, Operations and Expressions – PHP Variables – Operations and Expressions Control Statement – Array – Functions – Basic Form Processing – File and Folder Access – Cookies – Sessions –

Database Access with PHP – MySQL – MySQL Functions – Inserting Records – Selecting Records – Deleting Records – Update Records.

Unit VI   **9 hours**

The advances and the latest trends in the course as well as the latest applications of the areas covered in the course.The latest research conducted in the areas covered in the course.

Discussion of some latest papers published in IEEE transactions and ACM transactions, Web of Science and SCOPUS indexed journals as well as high impact factor conferences as well as symposiums.

Discussion on some of the latest products available in the market based on the areas covered in the course and patents filed in the areas.

Course Code: BSCS3570	Advances in Databases	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure	DBMS, Computer Architecture, Computer Networks				
Co-requisites					

OBJECTIVES:
To understand the underlying principles of Relational Database Management System.
To focus on the modelling and design of databases and usage of advanced data models.
To implement and maintain the structured, semi structured and unstructured data in an efficient database system using emerging trends.
To identify the different threats to databases
To learn the concept of cloud database and New SQL concepts
To understand the application of Big Data and Machine Learning concepts

OUTCOMES:
Upon Completion of the course, the students will be able,

CO1: Design and implement a database depending on the business requirements, Considering various design issues.
CO2: Understand the functionalities of Parallel and Distributed database
CO3: Categorize and design the structured, semi structured and unstructured databases CO4:
Characterize the database threats and its countermeasures
CO5: Design and apply the Cloud database and New SQL
CO6: Understanding the latest advances and its applications in Discrete Mathematics.

Course Content:

UNIT I   RELATIONAL MODEL   9hours

Database System Architecture – EER Modelling- Indexing – Normalization –Query processing and optimization – TransactionProcessing

UNIT II   PARALLEL DATABASES AND DISTRIBUTED DATABASES   9hours

Architecture, Data partitioning strategy, Interquery and IntraqueryParallelism –Parallel Query Optimization

UNIT III   SPATIAL AND MOBILE DB AND SEMI STRUCTURED DATABASES 9hours

Spatial databases -Type of spatial data– Indexing in spatial databases, Mobile Databases – Transaction Model in MDS - Semi Structureddatabases – XML –Schema-DTD- XPath- XQuery ,Semantic Web – RDF –RDFS

UNIT IV   DATABASE SECURITY   9hours

Introduction to Database Security Issues –Security Models –Different Threats to databases – Counter measures to deal with these problems

UNIT V   EMERGING TECHNOLOGIES   9hours

Cloud databases – Streaming Databases - Graph Databases-New SQL databases

Unit VI   9 hours
The advances and the latest trends in the course as well as the latest applications of the areas covered in the course.The latest research conducted in the areas covered in the course.Discussion of some latest papers published in IEEE transactions and ACM transactions, Web of Science and SCOPUS indexed journals as well as high impact factor conferences as well as symposiums.
Discussion on some of the latest products available in the market based on the areas covered in the course and patents filed in the areas.

Course Code: BSCS3530	Data Mining and Data Warehousing	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure	DBMS, DISTIRBUTED SYSTEM				
Co-requisites					

COURSE OBJECTIVES:

To interpret the contribution of data warehousing and data mining to the decision

1. support level of organizations To evaluate different models used for OLAP and data pre-processing
2. To categorize and carefully differentiate between situations for applying different
3. data mining techniques: mining frequent pattern, association, correlation, classification, prediction, and cluster analysis

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

1. Understand the data extraction and transformation techniques.

2. List the association rule mining techniques and understand association mining to correlation analysis, constraint based association mining.

3. Understand operational database, warehousing and multidimensional need of data base to meet industrial needs.

4. Understand the components of warehousing, classification methods and clustering analysis.

5. Identify and understand the Business analysis, query tools and application, OLAP etc.

6. Understanding the latest advances and its applications in Discrete Mathematics.

COURSE CONTENT:

UNIT I   DATA MINING   9 hours
Introduction – Data – Types of Data – Data Mining Functionalities – Interestingness of Patterns – Classification of Data Mining Systems – Data Mining Task Primitives – Integration of a Data Mining System with a Data Warehouse – Issues –Data Preprocessing.

UNIT II ASSOCIATION RULE MINING   9 hours
Association Rule - Mining Frequent Patterns, Associations and Correlations – Mining Methods – Mining various Kinds of Association Rules – Correlation Analysis – Constraint Based Association Mining.

UNIT III CLASSIFICATION   9 hours

Classification and Prediction – Basic Concepts – Decision Tree Induction – Bayesian Classification – Rule Based Classification – Classification by Back propagation – Support Vector Machines – Associative Classification – Lazy Learners – Other Classification Methods – Prediction.

UNIT IV CLUSTERING AND TRENDS IN DATA MINING   9 hours
Cluster Analysis – Types of Data – Categorization of Major Clustering Methods – K-means– Partitioning Methods – Hierarchical Methods – Density-Based Methods –Grid Based Methods – Model-Based Clustering Methods – Clustering High Dimensional Data – Constraint – Based Cluster Analysis – Outlier Analysis – Data Mining Applications.

UNIT V DATA WAREHOUSING AND BUSINESS ANALYSIS   9 hours

 Data warehousing Components –Building a Data warehouse –- Mapping the Data Warehouse to a Multiprocessor Architecture – DBMS Schemas for Decision Support – Data Extraction, Cleanup and Transformation Tools –Metadata - Online Analytical Processing (OLAP) – Multidimensional Data Model – OLAP Guidelines – Multidimensional versus Multirelational OLAP.

Unit VI   9 hours

Meaning of Research, Objectives of Research, Motivations in Research, types of Research, Research Approaches, Basic idea of writing a Research Paper, Research Project, and Patents, Overview of International Conferences, Journal.

Course Code: BSCS3540	Object Oriented Analysis and Design	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure	Data structure				
Co-requisites					

Objective:

Learn the basics of OO analysis and design skills.
Learn the UML design diagrams.
Learn to map design to code.
Be exposed to the various testing techniques.

Course Outcomes:

CO1- To understand the fundamentals of object modeling
CO2- To understand the designing objects with responsibilities of design patterns.
CO3- To understand the Use case modeling, conceptual classes and description classes.
CO4- To design the UML dynamic and implementation diagrams.
CO5- To understand the Code, OO Testing, Class, GUI and OO System Testing.
CO6: To understand the real time OO design, OO software specification.
CO7: Understand about the research and indexed publication.

COURSE CONTENT:

UNIT I   INTRODUCTION

9hours Introduction to OOAD – Unified Process – UML diagrams – Use Case – Class Diagrams– Interaction Diagrams – State Diagrams – Activity Diagrams – Package, component and Deployment Diagrams.

UNIT II   DESIGN PATTERNS   9hours

GRASP: Designing objects with responsibilities – Creator – Information expert – Low Coupling – High Cohesion – Controller – Design Patterns – creational – factory method – structural – Bridge – Adapter – behavioral – Strategy – observer.

UNIT III   CASE STUDY   9hours

Case study – the Next Gen POS system, Inception -Use case Modeling – Relating Use cases – include, extend and generalization – Elaboration – Domain Models – Finding conceptual classes and description classes – Associations – Attributes – Domain model refinement – Finding conceptual class Hierarchies – Aggregation and Composition.

UNIT IV   APPLYING DESIGN PATTERNS   9hours

System sequence diagrams – Relationship between sequence diagrams and use cases Logical architecture and UML package diagram – Logical architecture refinement – UML class diagrams – UML interaction diagrams – Applying GoF design patterns.

UNIT V   CODING AND TESTING   9hours

Mapping design to code – Testing: Issues in OO Testing – Class Testing – OO Integration Testing – GUI Testing – OO System Testing.

Unit VI   9 hours

The advances and the latest trends in the course as well as the latest applications of the areas covered in the course.The latest research conducted in the areas covered in the course.Discussion of some latest papers published in IEEE transactions and ACM transactions, Web of Science and SCOPUS indexed journals as well as high impact factor conferences as well as symposiums.
Discussion on some of the latest products available in the market based on the areas covered in the course and patents filed in the areas.

Course Code: BSCS3550	Microprocessor and Microcontroller	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

The student should be made to:

1. Study the Architecture of 8086 microprocessor.
2. Learn the design aspects of I/O and Memory Interfacing circuits.
3. Study about communication and bus interfacing.
4. Study the Architecture of 8051 microcontroller.

OUTCOMES:
At the end of the course, the student should be able to:

1. Design and implement programs on 8086 microprocessor.
2. Design I/O circuits.
3. Design Memory Interfacing circuits.
4. Design and implement 8051 microcontroller based systems.
5. Understand about the Interfacing with memory & Interrupts.
6. Understand about the research and indexed publication.

Course Content:

Unit I: Introduction   **8 lecture hours**
History of microprocessors, Introduction of 8086, Functional diagram of 8086, Register Organization, Memory Segmentation, Programming Model, Memory addresses. Physical memory organization, signal descriptions of 8086- common function signals. Minimum   and Maximum mode signals,Timing diagrams.

Unit II: Assembly Language Programming (Part-I)   **7 lecture hours**

Instruction formats, addressing modes, instruction set, assembler directives, simple programs involving logical, branch and arithmetic expressions

Unit III: Assembly Language Programming (Part-II)   **7 lecture hours**
Procedures: Near and Far procedures, Macros, String Manipulations, searching and sorting programs, Advanced features of Assembly language programming

Unit IV : I/O Interface   **9 lecture hours**
8255 PPI, various modes of   operation and   interfacing to 8086,   Interfacing keyboard, display, stepper motor interfacing, D/A and A/D converter, 8251 USART architecture and nterfacing, RS- 232.

Unit V: Interfacing with memory & Interrupts   **9 lecture hours**
Memory interfacing to 8086, Interrupt structure of 8086, Vector interrupt table, Interrupt service routine. Introduction to DOS and BIOS interrupts,   Interfacing 8259 Interrupt Controller, DMA Controller 8257.

Unit VI

The advances and the latest trends in the course as well as the latest applications of the areas covered in the course.

The latest research conducted in the areas covered in the course.

Discussion of some latest papers published in IEEE transactions and ACM transactions, Web of Science and SCOPUS indexed journals as well as high impact factor conferences as well as symposiums.

Discussion on some of the latest products available in the market based on the areas covered in the course and patents filed in the areas.

Text Books:

1 D.V. Hall, Microprocessors & Interfacing, TMH, 3rd edition
2 Barry B Brey, The intel microprocessor: architecture, programming and interfacing, Prentice hall of India, New Delhi, 2003.ISBN-0138027455, 4th Edition
Reference Books:

1 Alan Clements, "Principles of Computer Hardware", Oxford University Press, 3rd Edition, 2003, ISBN-9780198564539

Course Code: BSCS3560	Linux Administration	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES

At the end of the course, student will be able to

1. To Learn the basics of Linux system administrative tasks
2. To perform the Linux file systems management and various server management

COURSE CONTENT:

1. To Understand the file system on command prompt.
2. To Acquire the knowledge of process and network commands.
3. To acquire the knowledge of user creation and manage access permissions.
4. To Understand the Boot process initialization and managing file systems.
5. To Acquire the knowledge of Understanding DNS and Configuring DNS.
6. Manage and Produce latest trends of research and development.

UNIT I   MANAGING FILES FROM COMMAND LINE   9hours

Linux file system hierarchy - Locating files and directories by Name - Linux file system default permissions and access - Managing Linux file system permission - Controlling new file permission and ownership.

UNIT II MONITORING AND MANAGING LINUX PROCESS AND LOGS   9hours

Linux process - Controlling Jobs - Background Process and Foreground Process - Monitoring Process Activity - Killing Processes - Reviewing syslog files.

UNIT III MANAGING LINUX USERS   9hours

User creating and management commands - . /etc/password - /etc/shadow and /etc/group - Users and access permissions – Modifying user and group attributed.

UNIT IV BOOTING, FILE SYSTEMS AND CORE SYSTEM SERVICES   9   hours

Boot Loaders and init process - Enabling and Disabling Services, booting and shutting down - Managing file systems - Adding new disk - Syslog Daemon and CRON.

UNIT V SERVERS AND INTERNET SERVICES   9 hours

DNS: Understanding DNS and Configuring DNS - Configuring DNS Client – Virtualization - Setting Up Web Server: Understanding and Installing HTTP - Configuring Apache.

UNIT VI   **9 hours**

Vi editor, features of different shells, I/O in shell, control structure, loops, subprograms.

Shell scripts: Creating & executing shell scripts in Linux.

Text Books:

1 . Steve Shah and Wale Soyinka " Linux Administration: A Begineer's Guide", 4th Edition, Tata McGraw-Hill Publishing Company Limited, New Delhi, ISBN: 978- 0072262599.

2. Susan Lauber, Philip Sweany, Rudolf Kastl and George Hacker, "REDHAT System Administration-1 Student Work book", REDHAT Inc. 2014

Course Code: BSCS3511	Open Source Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES:
To expose students to FOSS environment and introduce them to use open source packages in open source platform.

COURSE OUTCOME:
 The students will be able to:
1. Identify and apply various Linux commands
2. Develop shell scripts and GUI for specific needs
3. Use tools like GIT
4. Perform basic level application deployment, kernel configuration and installation, packet management and installation etc

List of Exercises/Experiments:

1. Getting started with Linux basic commands for directory operations, displaying directory structure in tree format etc.
2. Linux commands for operations such as redirection, pipes, filters, job control, changing ownership/permissions of files/links/directory.
3. Advanced linux commands curl, wget, ftp, ssh and grep
4. Shell Programming : Write shell script to show various system configuration like
   - Currently logged user and his login name
   - Your current shell
   - Your home directory
   - Your operating system type
   - Your current path setting
   - Your current working directory
   - Number of users currently logged in
5. Write shell script to show various system configurations like
   - your OS and version, release number, kernel version
   - all available shells
   - computer CPU information like processor type, speed etc
    memory information
   - hard disk information like size of hard-disk, cache memory, model etc
   - File system (Mounted)
6. Write a shell script to implement a menu driven calculator with following functions
   1. Addition
   2. Subtraction
   3. Multiplication
   4. Division
   5. Modulus
7. Write a script called addnames that is to be called as follows .
   /addnamesulist username
    Here ulist is the name of the file that contains list of user names and username is a particular student's username. The script should
   - check that the correct number of arguments was received and print a message, in case the

- number of arguments is incorrect check whether the ulist file exists and print an error message if it does no
- check whether the username already exists in the file. If the username exists, print a message stating that the name already exists. Otherwise, add the username to the end of the list.

8. Version Control System setup and usage using GIT. Try the following features.
- Creating a repository
- Checking out a repository
- Adding content to the repository
- Committing the data to a repository
- Updating the local copy
- Comparing different revisions
- Revert
- Conflicts and a conflict Resolution

9. Shell script which starts on system boot up and kills every process which uses more than a specified amount of memory or CPU.

10. Introduction to packet management system : Given a set of RPM or DEB, build and maintain, and serve packages over http or ftp. Configure client systems to access the package repository.

11. Perform simple text processing using Perl, Awk.

12. Running PHP : simple applications like login forms after setting up a LAMP stack

13. Compiling from source : learn about the various build systems used like the auto* family, cmake, ant etc. instead of just running the commands. This could involve the full process like fetching from a cvs and also include autoconf, automake etc.,

14. Kernel configuration, compilation and installation : Download / access the latest kernel source code from kernel.org, compile the kernel and install it in the local system. Try to view the source code of the kernel

15. GUI Programming: Create scientific calculator – using any one of Gambas, GTK, QT

Course Code:BSCS3571	Advances in Databases Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

Objectives of the laboratory:

Upon successful completion of this lab the student of this lab will be able to:

1. Familiarize with creation of databases with constraints.

2. Understand the Control structures of PL/SQL Programming.

3. To be able to apply advanced concepts of PL/SQL like cursors, procedures and triggers.

List of experiments:

1. SQL data types, Operators, Literals, Constraints

2. Assignment on Queries: Select / From / Where/ Group By/Having Clause/ Order By Clause/ SQL Operators/ Joins/ Built-in Functions

3. PL/SQL Block Structure

4. Conditional Statements

5. Iterations: Simple Loops, For Loop, While Loop, Nested Loops

6. Exception Handling

7. Database Programming with Record Variables

8. Database Programming with Cursors, Cursor-For Loop

9. Procedures & Functions

10. Triggers

11. Packages

Course Code: BSCS3541	Object Oriented Analysis and Design Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OUTCOMES

Upon completion of this course, the students will be able to:

1. Perform OO analysis and design for a given problem specification.
2. Identify and map basic software requirements in UML mapping.
3. Improve the software quality using design patterns and to explain the rationale behindapplying specific design patterns
4. Test the compliance of the software with the SRS.

Draw standard UML diagrams using an UML modeling tool for a given case study and map design to code and implement a 3 layered architecture. Test the developed code and validate whether the SRS is satisfied.

1. Identify a software system that needs to be developed.
2. Document the Software Requirements Specification (SRS) for the identified system.
3. Identify use cases and develop the Use Case model.
4. Identify the conceptual classes and develop a Domain Model and also derive a Class Diagram from that.
5. Using the identified scenarios, find the interaction between objects and represent them using UML Sequence and Collaboration Diagrams
6. Draw relevant State Chart and Activity Diagrams for the same system.
7. Implement the system as per the detailed design
8. Test the software system for all the scenarios identified as per the usecase diagram
9. Improve the reusability and maintainability of the software system by applying appropriate design patterns.
10. Implement the modified system and test it for various scenarios

SUGGESTED DOMAINS FOR MINI-PROJECT

1. Passport automation system.
2. Book bank
3. Exam registration
4. Stock maintenance system.
5. Online course reservation system
6. Airline/Railway reservation system
7. Software personnel management system
8. Credit card processing
9. e-book management system
10. Recruitment system
11. Foreign trading system
12. Conference management system

13. BPO management system
14. Library management system
15. Student information system

HARDWARE REQUIREMENTS

Standard PC

SOFTWARE REQUIREMENTS

1. Windows 7 or higher
2. ArgoUML that supports UML 1.4 and higher
3. Selenium, JUnit or Apache JMeter

Course Code: BSCS3551	Microprocessor and Microcontroller Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE

To provide a theoretical & practical introduction to microcomputer and microprocessors, assembly language programming techniques, design of hardware interfacing circuit.

COURSE OUTCOME:

Upon successful completion of this subject, student will be able to

1. Solve basic arithmetic operations using the 8085 assembly language.

2. Write program to find out smallest/largest number stored in memory, program related to conversion from Binary to Gray code, Hexadecimal to decimal using the 8085 assembly language.

3. Understand the Hardware and Interfacing.

4. Write program with 8085.

5. Understand BCD Arithmetic, 16-Bit Data operations and Interrupts.

6. Interface with Data Converters

7. Demonstrate the concept of Programmable Interface Devices.

S.No	Program
1	ADDITION OF 2 8-BIT HEXADECIMAL NUMBERS
2	ADDITION OF 2 16-BIT HEXADECIMAL NUMBERS
3	SUBTRACTION OF 2 8-BIT HEXADECIMAL NUMBERS
4	SUBTRACTION OF 2 16-BIT HEXADECIMAL NUMBERS
5	MULTIPLICATION OF 2 8-BIT HEXADECIMAL NUMBERS
6	MULTIPLICATION OF 2 16-BIT HEXADECIMAL NUMBERS
7	DIVISION OF 2 8-BIT HEXADECIMAL NUMBERS
8	DIVISION OF 2 16-BIT HEXADECIMAL NUMBERS
9	ASCII ADDITION OF 2 DECIMAL NUMBERS

10	ASCII SUBTRACTION OF 2 DECIMAL NUMBERS
11	ASCII MULTIPLICATION OF 2 DECIMAL NUMBERS
12	ASCII DIVISION OF 2 DECIMAL NUMBERS
13	CONVERSION OF PACKED BCD TO UNPACKED BCD NUMBER
14	CONVERSION OF BCD NUMBER TO EQUIVALENT ASCII NUMBER
15	TO SORT ARRAY ELEMENTS IN AN ASCENDING ORDER
16	TRANSFER OF BLOCK OF DATA FROM ONE LOCATION TO ANOTHER
17	TO COMPARE TWO GIVEN STRINGS AND FIND OUT IF THEY ARE EQUAL OR NOT

Course Code: BSCS3561	Linux Administration Lab	L	T	P	C
Version No. 01	Date of Approval:	0	0	2	1
Prerequisite/Exposure	C Programming, Data Structures, etc.				
Co-requisites					

COURSE OBJECTIVE:

1. To understand and make effective use of linux utilities and shell scripting language to solve problems.
2. To implement in C some standard linux utilities like mv,cp,ls etc…
3. To Develop the skills the necessary for systems programming including file system programming,process and signal management and interprocess communication
4. To develop the basic skills required to write network programs using sockets.

COURSE OUTCOME:

1. Students will be able to understand the basic commands of linux operating system and can write shell scripts KNOWLEDGE
2. Students will be able to create file systems and directories and operate them UNDERSTAND
3. Students will be able to create processes background and fore ground etc..by fork() system calls SYNTHESIS
4. Students will be create shared memory segements, pipes ,message queues and can exercise inter process communication.

Sr.No	TOPIC
1.	Introduction to Basic Linux Commands &Editors
2.	Installation of RedHat Linux Operating System.
3.	Introduction to GRUB.CONF
4.	Linux System Administration
5.	Setting up Linux as a Proxy server
6.	Setting up Samba Server
7.	Setting up Local area Network LAN Topology &Networking (TCP/IP) through manual (Statically) by using setup command or through Wizard.
8.	Assigning Dynamically IP Addresses by configuring DHCP Server
9.	Setting up NFS File Server
10	Creation of Any Domain Name System
11	The Apache web Server
12	Setting up FTP Server
13	Firewall &Security Configuration
14	Using gccCompiler (Programming in C++) &Using JAVA Compiler (Execution of Simple Java Programs.&Demonstration of Implementing Socket Prog.)
15	Setting up Hardware Devices i.e. Sound card & printer
16	Working with X-Windows A]Switching TO A Graphical Login B]Setup video card,monitor and mouse for the X-server C]Changemy default desktop to KDED] Accessing X-window remotely. E]Installing True Type fonts from my MSWindows partition? E]How do I Display and Control a Remote Desktop using VNC
17	Configuring Mail Services Using Send mail

Elective – I

Course Code: BSCS3001	Human Computer Interaction	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

OBJECTIVES:

The student should be made to:

- Learn the foundations of Human Computer Interaction
- Be familiar with the design technologies for individuals and persons with disabilities
- Learn the guidelines for user interface
- Be aware of mobile HCI

OUTCOMES:

Upon completion of the course, the student should be able to:

- Develop meaningful user interface.
- Explain the HCI implications for designing multimedia/ ecommerce/ e-learning Web sites.
- Assess the importance of user feedback.
- Design effective HCI for individuals and persons with disabilities.
- Design effective dialog for HCI.

COURSE CONTENT:

UNIT I   FOUNDATIONS OF HCI   9hours

The Human: I/O channels – Memory – Reasoning and problem solving; The computer: Devices – Memory – processing and networks; Interaction: Models – frameworks – Ergonomics – styles – elements – interactivity- Paradigms.

UNIT II   DESIGN & SOFTWARE PROCESS   9hours

Interactive Design basics – process – scenarios – navigation – screen design – Iteration and prototyping. HCI in software process – software life cycle – usability engineering – Prototyping in practice – design rationale. Design rules – principles, standards, guidelines, rules. Evaluation Techniques – Universal Design.

UNIT III   MODELS AND THEORIES   9hours

Cognitive models –Socio-Organizational issues and stake holder requirements –Communication and collaboration models-Hypertext, Multimedia and WWW.

UNIT IV MOBILE HCI   9hours

Mobile Ecosystem: Platforms, Application frameworks- Types of Mobile Applications: Widgets, Applications, Games- Mobile Information Architecture, Mobile 2.0, Mobile Design: Elements of Mobile Design, Tools.

UNIT V   WEB INTERFACE DESIGN   9hours

Designing Web Interfaces – Drag & Drop, Direct Selection, Contextual Tools, Overlays, Inlays and Virtual Pages, Process Flow.Case Studies.

TEXT BOOKS:

1. Alan Dix, Janet Finlay, Gregory Abowd, Russell Beale, "Human Computer Interaction", 3rd Edition, Pearson Education, 2004 (UNIT I , II & III)

2. Brian Fling, "Mobile Design and Development", First Edition , O'Reilly Media Inc., 2009   (UNIT – IV)

3. Bill Scott and Theresa Neil, "Designing Web Interfaces", First Edition, O'Reilly, 2009. (UNIT-V)

Course Code: BSCS3002	Big Data Technology	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES:

Understanding Data Science Process and learning techniques, tools, Statistical Methodologies and Machine learning algorithms used in the process.

COURSE OUTCOMES:

After completion of this course, the students should be able to understand & comprehend Data science problem; and should be able to provide analytical solution to it.

COURSE CONTENT:

UNIT I   INTRODUCTION TO BIG DATA: 9hours

Introduction – distributed file system – Big Data and its importance, Four V's in bigdata, Drivers for Big data, Big data analytics, Big data applications. Algorithms using map reduce, Matrix-Vector Multiplication by Map Reduce.

UNIT II   INTRODUCTION HADOOP :   9hours

Big Data – Apache Hadoop & Hadoop EcoSystem – Moving Data in and out of Hadoop – Understanding inputs and outputs of MapReduce - Data Serialization.

UNIT- III   HADOOP ARCHITECTURE: 9hours

Hadoop Architecture, Hadoop Storage: HDFS, Common Hadoop Shell commands , Anatomy of File Write and Read., NameNode, Secondary NameNode, and DataNode, Hadoop MapReduce paradigm, Map and Reduce tasks, Job, Tasktrackers - Cluster Setup – SSH & Hadoop Configuration – HDFS Administering –Monitoring & Maintenance.

UNIT-IV   HADOOP ECOSYSTEM AND YARN :   9hours Hadoop ecosystem components - Schedulers - Fair and Capacity, Hadoop 2.0 New Features- NameNode High Availability, HDFS Federation, MRv2, YARN, Running MRv1 in YARN.

UNIT-V   HIVE AND HIVEQL, HBASE: 9hours Hive Architecture and Installation, Comparison with Traditional Database, HiveQL - Querying Data - Sorting And Aggregating, Map Reduce Scripts, Joins &Subqueries, HBase concepts- Advanced Usage, Schema Design, Advance Indexing - PIG, Zookeeper - how it helps in monitoring a cluster, HBase uses Zookeeper and how to Build Applications with Zookeeper.

Course Code: BSCS3003	Introduction to Cyber Security	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES

To select appropriate techniques to tackle and solve problems in the discipline of

Cyber security management; To know why security and its management are important for any modern organisation;

COURSE OUTCOMES

BSCS3004.1	Understand the concepts of cyber security fundamental, threats, challege, cyber crime and security policy.
BSCS3004.2	Understand the concepts of Cyber Security Vulnerabilities, System administration and Complex Network Architectures.
BSCS3004.3	Review and practice of Cryptography, Denial of Service Filters, Ethical Hacking and Firewalls.
BSCS3004.4	Understand the concepts of HTTP Applications, Web Services, Security and Challenges.
BSCS3004.5	Understand the concepts of Cyber Security Regulations, Roles of International Law,Standards and Policy.
BSCS3004.6	Understand about the research and indexed publication.

COURSE CONTENT:

Unit 1: Introduction to Cyber Security   9hours
Overview of Cyber Security, Internet Governance – Challenges and Constraints, Cyber Threats:-Cyber Warfare-Cyber Crime-Cyber terrorism-Cyber Espionage, Need for a Comprehensive Cyber Security Policy, Need for a Nodal Authority, Need for an International convention on Cyberspace.

Unit 2: Cyber Security Vulnerabilities   9hours
Cyber Security Vulnerabilities-Overview, vulnerabilities in software, System administration, Complex Network Architectures, Open Access to Organizational Data, Weak Authentication, Unprotected Broadband communications, Poor Cyber Security Awareness.

Unit 3: Cyber Security Safeguards   9hours
Cyber Security Safeguards- Overview, Access control, Audit, Authentication, Biometrics, Cryptography, Deception, Denial of Service Filters, Ethical Hacking, Firewalls, Intrusion Detection Systems, Response, Scanning, Security policy, Threat Management.

Unit 4: Securing Web Application, Services and Servers   9hours
Introduction, Basic security for HTTP Applications and Services, Basic Security for SOAP Services, Identity Management and Web Services, Authorization Patterns, Security Considerations, Challenges.

Unit 5: Cyberspace and the Law

8hours Introduction, Cyber Security Regulations, Roles of International Law, the state and Private Sector in Cyberspace, Cyber Security Standards. The INDIAN Cyberspace, National Cyber Security Policy 2013.

Unit VI

The advances and the latest trends in the course as well as the latest applications of the areas covered in the course.

The latest research conducted in the areas covered in the course.

Discussion of some latest papers published in IEEE transactions and ACM transactions, Web of Science and SCOPUS indexed journals as well as high impact factor conferences as well as symposiums.

Discussion on some of the latest products available in the market based on the areas covered in the course and patents filed in the areas.

Elective – II

Course Code: BSCS4001	Cloud Computing		L	T	P	C
Version No. 01	Date of Approval:		3	0	0	3
Prerequisite/Exposure						
Co-requisites						

COURSE OBJECTIVES

This course introduces a series of current cloud computing technologies, including

Technologies for Infrastructure as a Service, Platform as a Service, Software as a Service and Physical Systems as a Service.

Objective of this course is to learn different layers of the cloud technologies, practical solutions such as Google, Amazon, Microsoft, SalesForce.com, etc. solutions as well as theoretical solutions.

COURSE OUTCOMES

Upon successful completion of this course, students will be able to

1. Define cloud computing and related concepts

2. Understand the key dimensions of the challenges of Cloud Computing

3. Understand the assessment of the economics , financial, and technological implications for selecting cloud computing for an organization

4. Describe the benefits of cloud computing and to understand different layers of the cloud technologies, practical solutions

5. Understand the challenges of cloud computing

6. Understand how cloud components fit together

7. Determine the suitability of in-house v/s hosted solutions

Course Content :

Unit 1   **9hours**

Cloud Computing Overview – Origins of Cloud computing – Cloud components - Essential characteristics – On-demand self-service , Broad network access , Location independent resource pooling , Rapid elasticity , Measured service

Unit II   **9 hours**

Cloud scenarios-Benefits: scalability , simplicity , vendors ,security. Limitations – Sensitive information - Application development – Security concerns - privacy concern with a third party - security level of third party - security benefits Regularity issues: Government policies

Unit III   **9hours**

Cloud architecture: Cloud delivery model – SPI framework , SPI evolution , SPI vs. traditional IT Model. **Software as a Service** (SaaS): SaaS service providers – Google App Engine, Salesforce.com and googleplatfrom – Benefits – Operational benefits - Economic benefits – Evaluating SaaS. **Platform as a Service**(PaaS): PaaS service providers – Right Scale – Salesforce.com– Rackspace –Force.com services and benefits.

Unit IV **9hours**

Infrastructure as a Service(IaaS): IaaS service providers – Amazon EC2 , GoGrid – Microsoft soft implementation and support – Amazon EC service level agreement – Recent developments. Benefits **Cloud deployment model** : Public clouds – Private clouds – Community clouds - Hybrid clouds - Advantages of Cloud computing

Unit V **9hours**

Virtualization: Virtualization and cloud computing - Need of virtualization – cost , administration , fast deployment , reduce infrastructure cost – limitations. **Types of hardware virtualization**: Full virtualization - partial virtualization - para virtualization. **Desktop virtualization**: Software virtualization – Memory virtualization - Storage virtualization   –Data virtualization – Network virtualization.

2. Cloud Computing: Web-Based Applications That Change the Way You Work and Collaborate Online - Michael Miller - Que 2008
3. Cloud Computing, Theory and Practice, Dan C Marinescu, MK Elsevier.
4.   Cloud Computing, A Hands on approach, ArshadeepBahga, Vijay Madisetti, University Press
5. Mastering Cloud Computing, Foundations and Application Programming, Raj Kumar Buyya, Christenvecctiola, S Tammaraiselvi, TMH.

Course Code: BSCS4002	**Distributed Systems**	L	T	P	C
Version No. 01	**Date of Approval:**	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

This course provides an introduction to the fundamentals of distributed computer systems, assuming the availability of facilities for data transmission.

COURSE OUTCOME:

The structure of distributed systems using multiple levels of software is emphasized. Specific topics include:

1. Distributed algorithms
2. Distributed file systems
3. Distributed databases,
4. Security and protection
5. Distributed services such as the world-wide web, and Examples of research and commercial distributed systems.

COURSE CONTENT:

UNIT I   **9hours**

Introduction to Distributed Computing Systems, System Models, and Issues in Designing a Distributed Operating System, Examples of distributed systems.

UNIT II   **9hours**

Features of Message Passing System, Synchronization and Buffering, Introduction to RPC and its models, Transparency of RPC, Implementation Mechanism, Stub Generation and RPC Messages, Server Management, Call Semantics, Communication Protocols and Client Server Binding.

UNIT III   **9hours**

Introduction, Design and implementation of DSM system, Granularity and Consistency Model, Advantages of DSM, Clock Synchronization, Event Ordering, Mutual exclusion, Deadlock, Election Algorithms.

UNIT IV   **9hours**

Task Assignment Approach, Load Balancing Approach, Load Sharing Approach, Process Migration and Threads.

UNIT V   **9hours**

File Models, File Accessing Models, File Sharing Semantics, File Caching Schemes, File Replication, Atomic Transactions, Cryptography, Authentication, Access control and Digital Signatures.

Reference Books

2 .George Coulouris, Jean Dollimore, Tim Kindberg: " Distributed Systems" , Concept and Design, 3rd Edition, Pearson Education, 2005.

Course Code: BSCS4003	Operational Research for Computer Science	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES:

The aim of this course is to acquaint the students with the fundamental concepts of probability and statistics.

To provide an understanding of the processes by which real life statistical problems are analyzed.

To develop an understanding of the role of statistics in Operational Research.

COURSE OUTCOMES:

Students completing this course will be able to:

Quantify uncertainty using probability, learn how to find probability using the concepts of random variables and distribution functions, obtain characteristics of the underlying distributions, and study functional relationships between two random variables.

 Know various discrete and continuous probability distributions along with their characteristics and identify the situations where they provide realistic models.

Learn about sampling and sampling distributions along with their characteristics which will help them analyze the population or phenomenon from which the sample is drawn.

Learn inferential methods wherein the distributional form of population or phenomenon from which the sample is drawn is either known (parametric) or unknown (nonparametric).

COURSE CONTENT:

UNIT I: Introductory Linear Algebra   **9hours**

System of linear equations, Matrices, Rank and Determinant of a matrix, Linearly dependent and independent vectors, Basis of a matrix.

UNIT II: Linear programming – I   **9hours**

Optimization Problems, Introduction to LP Formulation, Convex sets, Extreme points, Geometry of Linear Programs, Basic feasible solutions (BFS), Neighborhoods, Local and global optima, Profitable Column, Pivoting, Simplex Algorithm with initial BFS, Graphical method.

UNIT III: Linear programming – II   **9hours**

Degeneracy and Bland'sAnticycling rule (Definition), Simplex Algorithm without initial BFS, Artificial variable techniques – two phase method, M-Charnes method, special cases in LPP.

UNIT IV: Duality and Transportation Models   **9hours**

Definition of the dual problem, primal-dual relationships, economic interpretation of duality, complementary slackness conditions.Transportation Algorithm, Assignment model, Hungarian Method.

UNIT V: Queuing Models   **9hours**

Introduction to Queuing Models - Elements of Queuing Model, Exponential distribution, Poisson Distributions, Poisson Queuing Models, Single Server model, Multiple Server model Introduction to Markov Chains - Introduction to Markov chains, transition probabilities, classification of states, Steady state probabilities, Absorbing states

Elective – III

Course Code: BSCS5001	**Disruptive Technology**	L	T	P	C
Version No. 01	**Date of Approval:**	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVES:

Principles of Disruptive Technology: Evaluate your organization in light of the four Principles of Disruptive Technology to identify practices which are both productive for maximizing existing technology and anti-productive in regard to developing new technology.

Qualities of Disruptive Innovation: Apply the potential impact and role of the following variables to an analysis of your organization:

1. Coming in at the bottom of the market;
2. The extendable up-market core;
3. The significance of non-consumption; andchanging metrics.

Communities of Disruptive Innovation: Evaluate and participate in at least three online resources and communities supporting Disruptive Innovation for the purpose of gathering knowledge to benefit your current organization.

Recommendations to Capture Future Markets: Develop recommendations using the four Principles of Disruptive Technology to guide your organization in developing new technologies to capture future markets.

COURSE OUTCOMES:

- Students will learn fundamental tools to understand how to manage the dynamic aspects of technology-enabled marketplaces as a way to understand industry disruption.
- They will also develop an understanding of the key elements that need to be evaluated when trying to anticipate and manage disruptive technologies in the marketplace.
- To acquire inquisitive attitude towards research topics in Disruptive.

COURSE CONTENT:

Unit I: Introduction &Enterprise Innovation   9 lecture hours

Introduction - Business and IT Trends - Enterprise Software Trends- Key Emerging Technology Vendors - Key Applications- ITIS Innovations - Industry 4.0

Unit II: Web Services & Peer Services   9 lecture hours

Web services Market (Technology, Business Strategy) - Peer Services Market (Technology, Business Strategy) – Web 2.0- Motion UI and Progressive Web Apps (PWA) - Hybrid Cloud – Containers (Docker,Warden, Garden)

Unit III: Real-Time Computing & Business Process Management   9 lecture hours

Real-Time Computing (Technology, Business Strategy) -Prescriptive Analytics - Edge Computing - Business Process Management (Technology- Business Strategy) - Cyber Physical Systems.

Unit IV: Mobile Business & Enterprise Security   **9 lecture hours**

Wireless Infrastructure Management- Touch commerce and Personalized Shopping - Location-Based Services-Telematics- Electronic Tagging - Enterprise Security Prevention- Detection- Reaction- Estimating Results

Unit V: Future Trends   **9 lecture hours**

AR/VR- Digital currencies and Blockchain Technology- Intelligent Computing AI and Autonomous Robots– Data Science and Deep learning- Computer Vision – Industrial IoT.

Unit VI   **9 hours**

Meaning of Research, Objectives of Research, Motivations in Research, types of Research, Research Approaches, Basic idea of writing a Research Paper, Research Project, and Patents, Overview of International Conferences, Journal.

Course Code: BSCS5002	SOFTWARE PROJECT MANAGEMENT	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure	Software Engineering				
Co-requisites					

COURSE OBJECTIVES:

- To understand the Software Project Planning and Evaluation techniques.
- To plan and manage projects at each stage of the software development life cycle (SDLC).
- To learn about the activity planning and risk management principles.
- To manage software projects and control software deliverables.
- To develop skills to manage the various phases involved in project management and people management.
- To deliver successful software projects that support organization's strategic goals.

COURSE OUTCOMES:

At the end of the course, the students should be able to:

- Understand Project Management principles while developing software.
- Gain extensive knowledge about the basic project management concepts, framework and the process models.
- Obtain adequate knowledge about software process models and software effort estimation techniques.
- Estimate the risks involved in various project activities.
- Define the checkpoints, project reporting structure, project progress and tracking mechanisms using project management principles.
- Learn staff selection process and the issues related to people management.
- To acquire inquisitive attitude towards research topics in SPM.

COURSE CONTENT:

UNIT I PROJECT EVALUATION AND PROJECT PLANNING   9hours

Importance of Software Project Management – Activities – Methodologies – Categorization of Software Projects – Setting objectives – Management Principles – Management Control – Project portfolio Management – Cost-benefit evaluation technology – Risk evaluation – Strategic program Management – Stepwise Project Planning.

UNIT II PROJECT LIFE CYCLE AND EFFORT ESTIMATION   9hours

Software process and Process Models – Choice of Process models – Rapid Application development – Agile methods – Dynamic System Development Method – Extreme Programming– Managing interactive processes – Basics of Software estimation – Effort and Cost estimation techniques – COSMIC Full function points – COCOMO II – a Parametric Productivity Model.

UNIT III ACTIVITY PLANNING AND RISK MANAGEMENT **9 hours**

Objectives of Activity planning – Project schedules – Activities – Sequencing and scheduling – Network Planning models – Formulating Network Model – Forward Pass & Backward Pass techniques – Critical path (CRM) method – Risk identification – Assessment – Risk Planning –Risk Management – – PERT technique – Monte Carlo simulation – Resource Allocation – Creation of critical paths – Cost schedules.

UNIT IV PROJECT MANAGEMENT AND CONTROL **9 hours**

Framework for Management and control – Collection of data – Visualizing progress – Cost monitoring – Earned Value Analysis – Prioritizing Monitoring – Project tracking – Change control – Software Configuration Management – Managing contracts – Contract Management.

UNIT V STAFFING IN SOFTWARE PROJECTS **9hours**

Managing people – Organizational behavior – Best methods of staff selection – Motivation – The Oldham – Hackman job characteristic model – Stress – Health and Safety – Ethical and Professional concerns – Working in teams – Decision making – Organizational structures – Dispersed and Virtual teams – Communications genres – Communication plans – Leadership.

Unit VI **9 hours**

Meaning of Research, Objectives of Research, Motivations in Research, types of Research, Research Approaches, Basic idea of writing a Research Paper, Research Project, and Patents, Overview of International Conferences, Journal.

Course Code:BSCS5003	Internet of Things	L	T	P	C
Version No. 01	Date of Approval:	3	0	0	3
Prerequisite/Exposure					
Co-requisites					

COURSE OBJECTIVE:

Students will be explored to the interconnection and integration of the physical world and the cyber space. They are also able to design & develop IOT Devices.

COURSE OUTCOMES:

1. Able to understand the application areas of IOT.
2. Able to realize the revolution of Internet in Mobile Devices, Cloud & Sensor Networks.
3. Able to understand building blocks of Internet of Things and characteristics.
4. Understanding about the design and development of IoT.
5. understanding about the data analytics and supporting services
6. To acquire inquisitive attitude towards research topics in IoT.

COURSE CONTENT:

UNIT I FUNDAMENTALS OF IoT   **9 hours**

Evolution of Internet of Things – Enabling Technologies – IoT Architectures: oneM2M, IoT World Forum (IoTWF) and Alternative IoT models – Simplified IoT Architecture and Core IoT Functional Stack -– Fog, Edge and Cloud in IoT – Functional blocks of an IoT ecosystem – Sensors, Actuators, Smart Objects and Connecting Smart Objects

UNIT II IoT PROTOCOLS   **9 hours**

IoT Access Technologies: Physical and MAC layers, topology and Security of IEEE 802.15.4, 802.15.4g, 802.15.4e, 1901.2a, 802.11ah and LoRaWAN – Network Layer: IP versions, Constrained Nodes and Constrained Networks – Optimizing IP for IoT: From 6LoWPAN to 6Lo, Routing over Low Power and Lossy Networks – Application Transport Methods: Supervisory Control and Data Acquisition – Application Layer Protocols: CoAP and MQTT

UNIT III DESIGN AND DEVELOPMENT   **9 hours**

Design Methodology – Embedded computing logic – Microcontroller, System on Chips – IoT system building blocks – Arduino – Board details, IDE programming – Raspberry Pi – Interfaces and Raspberry Pi with Python Programming.

UNIT IV DATA ANALYTICS AND SUPPORTING SERVICES   **9 hours**

Structured Vs Unstructured Data and Data in Motion Vs Data in Rest – Role of Machine Learning – No SQL Databases – Hadoop Ecosystem – Apache Kafka, Apache Spark – Edge Streaming Analytics and Network Analytics – Xively Cloud for IoT, Python Web Application Framework – Django – AWS for IoT – System Management with NETCONF-YANG

UNIT V CASE STUDIES / INDUSTRIAL APPLICATIONS   **9 hours**

Cisco IoT system – IBM Watson IoT platform – Power Utility Industry – Smart and Connected Cities: Layered architecture, Smart Lighting, Smart Parking Architecture and Smart Traffic Control.

Unit VI   **9 hours**

Meaning of Research, Objectives of Research, Motivations in Research, types of Research, Research Approaches, Basic idea of writing a Research Paper, Research Project, and Patents, Overview of International Conferences, Journal.
